Commodore Beasties

Robotics fans will be pleased to read that an infra red version of the Beasty control unit (previously available only for the BBC micro) is now available for the Commodore 64. It will allow you to control the Beasty Robotic Arm.

The device is an eight channel interface which its distributors, Commotion, claim to be fully compatible with both the Beasty arm and its mobile base. It can

servo motors within a minimum range of six

Commotion hasn't fixed prices for the infra red Beasty vet, but say it will be under £50. It also supplies servo motors from Futaba at £14.50 each for the standard model. The Beasty arm itself comes in two forms: £110 for a ready-assembled package with three servos, or £39.95 for the DIY kit. More detail

from Commotion on 01-804

Smith has announced that it's going to make it easier for you to splash out on computers, peripherals and software. Its computer shops and departments are now between £400 and £2,000, ten percent of which is taken as an initial deposit. You pay back in monthly installments over one, two or three years. Maybe now you'll be able to buy that disk drive, and

SHORTS Breakaway: yet another

house musical-chairs game. Mark Meakings, co-founder of Bubble Bus has left to set up a new company, Lionheart. Apparently, Meakings decided it was time to break away and start afresh. And what are Lionheart's aims? To produce quality" software. But that may depend on you -Lionheart is looking for talented freelance programmers. SHORTS

Radio news: amateur radio

buffs will be pleased to hear that Moray Micro Computing has announced a QTH Locator program for the 64 (£6.50 on tape, £8.50 on disk). The program calculates the distance between QTH Locator squares, a new QTH Locator square between two points calculates the new six-digit QTH Locator square from the previous five-digit QRA locator. What's a QTH Locator? Better ask a Radio episode in the great software Ham. Moray is on 05427 384.

Fact-packed software

Piper Software, a subsidiary of Pan Books, has introduced a range of software for the Commodore 64 that "brings information to life as never before", according to the blurb. The subjects being treatment are birds. aeroplanes, dinosaurs and

astronomy. There's a Software Activity Pack for each of these subjects, designed for children aged eight or over, which includes a cassette containing four education

games, and an accompanying 96-page fact book on the particular subject (after all, Pan are book publishers). Each package in the range costs

For those of you interested in aeroplanes, the Aircraft program gives you four games: a flight simulator you get an unusual sideways view of the plane), a program to test your skills at taxiing, an enemy fighter identification program and a shoot 'em up game (you

estimate range, height and bearing) As well as the accompanying book, the Astronomy package has five

games on its cassette: pilot questions to progress from Trainee to Ace Astronaut, build a databank to hold your planet information. More interestingly, there's a the Constellations and a Zodiac Star Map that shows you how the constellations

Hink together. The Birds package also gives you five games. ranging from steering a winter migrating bird back a database in which to collect your bird facts. Finally, there's Dinosaurs, which follows roughly the same type of format, though one of the games sets out to let you control the

evolutionary process amazing what you can do with a 64.

THE ROTRONICS DR2301 COMPUTER/ AUDIO CASSETTE RECORDER

The Rotronics DR2301 has all the facilities you would expect of a quality audio recorder and also works perfectly with the VIC 20 and CBM 64 computers without any fiddly separate boxes or adaptors. Simply connect the DR2301 directly with your Commodore computer via

the lead supplied and you are ready to start. The built-in interface circultry ensures that SAVEing and LOADing is completely reliable – even when using commercially produced software. The DR2301 also allows the

computer to sense when the PLAYkey has been depressed. Additional features are auto-stop, tape counter, inbuilt microphone and foldaway carrying handle. The DR2301 is also compatible with the ZX81, Spectrum and many other popular home computers.

computers.
The DR2301 will take its
power from the computer
(Commodore only), mains
adaptor (supplied) or internal
batteries. Each unit carries a
full 12 month guarantee.

Superb accessories for Commodore from Rotronics

THE ROTRONICS PORTABLE CASE

Here is the ideal portable work station for home, school or work. Specially made for most home microcomputers, it contains your VIC 20 or CBM 64 within a smart executive style case with removable lid for convenience in use.

convenience in use. The individually tallored foam insert securely protects your micro and cassette recorder (C2N or DR2301) during transit. — Additional storage space in the lid holds manuals and up to twenty cassettes. A scalpel is provided to modify the insert for expansion units and an alternative

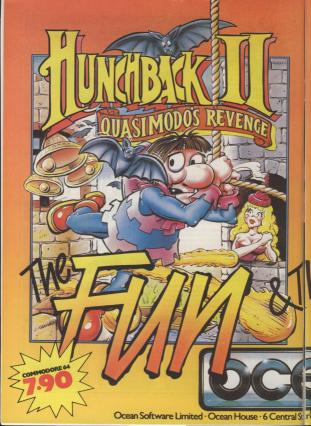

insert can be supplied if you change your hardware in the future. The case is also available with uncut foam inserts.

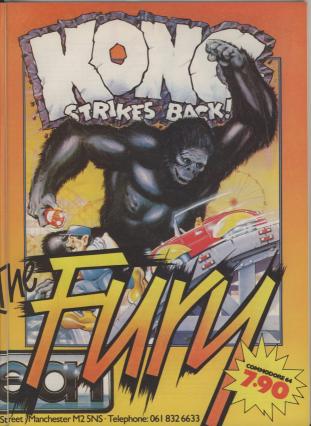

All components remain fully operational within the case via inter-connections routed between the double layers of foam, so there are

no unsightly leads.
The case has been designed for easy use with each component positioned for convenient operation.
The overall dimensions are 138mm x 725mm x 363mm.

FIRST AID

for your 64

Computers, like people, are fallible. They need the right combination of code and care to perform effectively in the business or the home. And that requires first hand knowledge from you to create a healthy operating environment for your Commodore 64.

Knowledge about machine language, about the lesser known qualities of the 64, about the disc drives, graphics, and about the tricks and tips to keep your 64 on line. That's why First Publishing has now launched in the UK a series of high quality books and software packages to provide a complete health care kit for your 64. Commodore 64 users throughout Europe have already found it a tonic. We think you will, too.

For 3 holder or all the Commodor of blocks and software packages available from the Publishment of the Publi

Welcome to the pleasuregame

Is there no end to Frankiemania? Not content with cornering the record, t-shirt and video market the band are preparing an assault on the software

assault on the software world.

Ocean Software have joined forces with Island Records and ZTT, the group's label, to produce an

group's label, to produce and advanced computer game featuring the naughty scallies. It will run on both the Spectrum and the Commodore 64, with the three companies receiving the revenue and the band receiving royalties.

It's described as a "spectacular" in the blurb and it will follow an adventure format involving the group in various situations, though, we're assured, "It won't be dirty". Shame. The story has yet to be written but it seems that Paul Morley, ZTT impressario, will be

responsible for much of the creative input. Laughter. Games which link up with pop groups haven't all been

Shakin' Stevens single with a program on the back didn't sell very well (that of course couldn't have had anything to do with the quality of the single, though). Also, The Thompson Twins' management pulled the plug on a computer game

involving the band.
These setbacks don't
bother David Ward, director
of Ocean. "Frankie are
simply a hook to hang the
game on. The game has to
be good — often titles linked
with stars won't sell because

they rely on the name.
"The Frankie game will
work because it can be
played on different levels,
like the various meanings in
a book. There is a concept
behind the band that makes
them very interesting. They

are life imitating art."
Sounds to us as if he's
fallen for the ZTI hype,
either that or he's been
reading Paul Morley's old
NME articles. We'll have to
wait for the result of all this
philosophy until the spring,
when it will sell for £9.95.

Holly Johnson: art imitates life imitates software game

Real music keyboard

There are plenty of software poackages variable to exploit the music making potential of your Commodore 54, but most of them use the 54's keyboard as a music keyboard — and that's a bore for budding Stevie Wonders. Now, LVL, a Nottingham-based company has produced the Echo 1 keyboard can produced the Echo 1 keyboard complete with Organ Master software (on cassette or disk), that plugs

straight into the 64. It costs 199.95.

The three-octave keyboard is sturdily built with full-size keys. It plugs into the 64's user port via a ribbon cable and adaptor socket, and needs no external power supply. Its accompanying software comprises two modes: organ and synthesiser.

When run, the program is in organ mode. Your screen

shows roughly half of the 64's keyboard and the tone and effects tabs associated with each computer key. In this mode, any note played on the Echo 1 is immediately sounded. Two keys also let you select one-linger major and minor chords. There's provision for tremolo.

vibrato and for lifting or lowering pitch to tune the organ to other instruments In synthesiser mode the who've already bought cassettes, the company will exchange them. Just send the cassette to Level 9 with \$2.50 to cover cost, and a disk should wing its way to so of the course to you. Oh, and you can get cost of the course of

PROGRAMMERS

WE ARE LOOKING FOR TOP QUALITY PROGRAMMES TO MARKET IN THE UK AND ABROAD. THE PROGRAMMES MUST BE OF TOP QUALITY AND IN MACHINE CODE WITH GOOD GRAPHICS AND SOUNDS AND ORIGINAL CONCEPT. WE ARE LOOKING FOR PROGRAMMERS TO CARRY OUT WORK ON NEW MACHINES SUCH AS THE C. B. M. 16 AMSTRAD AND M.S. WE CAN SUPPLY THESE MACHINES TO CARRY OUT WORK FOR MIRAGE. WE ARE ALSO OFFERING ESON PRIZE FOR THE BEST PROGRAMME RECEIVED BY THE END OF FEBRUARY 1985 WHICH WE WILL DECIDE TO MARKET. WE OFFER AN OUT RIGHT PAYMENT OR 10% PLUS PAYMENT OR 20% BOYALTIES. FOR MORE INFORMATION CONTACT THE SOFTWARE MANAGER HE WILL BE GLAD TO LISTEN TO ANY QUESTIONS YOU MAY HAVE.

SOFTWARE HOUSES

WE ARE LOOKING FOR TOP SELLING PROGRAMMES TO DISTRIBUTE TO OUR WIDE RANGE OF OUTLETS THROUGHOUT THE UK AND GIVE YOU A VERY FAST SERVICE TO HELP WITH YOUR SALES AND TO MAKE THE MOST OF YOUR PRODUCTS. SEND A SAMPLE COPY OF YOUR PRODUCTS. WITH RATES AND TERMS FOR A FAST ASSESMENT. FOR MORE INFORMATION CONTACT THE SALES MANAGER HE WILL BE GLAD TO HELF AND ASSIST YOU.

DEALERS AND DISTRIBUTERS

DEALERS WE HAVE THE BEST SELLERS FROM THE BEST PRODUCERS WE ALSO OFFER VERY GOOD PATES AND TERMS TO HELP YOU AND US TO ACHIEVE THE BEST SALES AND SERVICE. FOR MORE INFORMATION CONTACT THE SALES MANAGER.

DISTRIBUTES HAVE YOU GOT THE MIRAGE RANGE ON YOUR

SHELVES, IF NOT THEN CONTACT THE SALES OFFICE FOR SAMPLES AND RATES.

Choosing a printer is a lot easier than

HERE are dozens of quality printers from which to choose. With quality price tags of around £250. The Brother M-1009, however, breaks all the rules.

Stays defiantly below the £200 barrier. Though it has far more than its fair share of features, it maintains

the extraordinarily low price of £199.95 Travels at a steady fifty. In the speed stakes, the M-1009 is certainly no slouch, being

fully capable of up to 50 characters per second. Providing bi-directional and logic seeking printing for normal characters and uni-directional printing for super and sub script

and graphics. Prints on any paper.

Being an impact printer, the M-1009 will print on virtually any paper, including letter headings, invoices and standard office

stationery. It will even print two copies together with your original.

A superb character recommendation. In its price range, the M-1009 has a great deal more character than many printers.

96 no less, plus international type and graphic characters. Reliability comes as standard. Built to the same exacting standards as Brother's elite office printers, the Brother M-1009 already has faultless credentials for reliability.

Its 9 pin dot matrix head, for example, has an astonishing 20 million character service life.

One printer that doesn't block out the light Many home computers tend to be a little on the large side. In contrast, the compact M-1009, at only 7 cm high, keeps a

Well designed, reliable - and conscientious The Brother M.1009

discreet profile.

The future at your fingertips.

COMMODORE 64 (Joystick Compatible)

SYSTEM SNIPPETS

Good news for Compuneteers fed up with the speed of the system. Compunet are working on some time-saving enhancements and, I'm assured, the system will be working up to three times faster in the near future. Scrolling software for uses with the

Scrolling software for use with the Compunet modem will soon be available. If you've used Prestel you'll know that, after displaying a page, the screen clears and the next one starts from the top of the screen again.

Scrolling means that any text simply moves up the screen, just like a piece of paper in a typewriter.

The software is already complete and, when the documentation is finished, you'll be able to download it just like Viewdata and Terminal — the programs which allow you to access

With this extra scrolling facility, you can use a Compunet modem as a terminal to other mainfames, and can log in to PSS. This is BT's data network, with access to many other computers. Details from your local BT sales office. Be warned, though, if my experience is anything to go by, they probably won't know what you're talking about.

MUD SLINGING

A trigger product, in the case of a network, is a facility which, on its own, is grounds enough to make you subscribe. Homelink, for example, is a homebanking service. The average Homelink subscriber joins Presele simply because Homelink is not available anywhere else.

MUD, a cult game among many micro owners, is set to be Compuner's trigger product. It's an adventure game, running in real time, which can support around twenty users at once. Each person logs in via a micro and a

The rights to MUD were recently sold by its author Richard Bartle to Century Communications and the

sold by its author Richard Bartle to Century Communications and the game has been made available on Compunet.

The present version is written for a DEC10 minicomputer, and a link is provided between Compunet and the DEC machine.

The only problem for the average user must be the cost. At £5 a month plus £3 per hour, playing MUD on Compunet isn't a cheap way of having fun.

If you're thinking of joining Compunet mainly to play the game, you might do better to think of joining PSS. You pay £25 initially, then £6.25 per quarter. Armed with your PSS identity numbar, you can gain cheap access to Essex University, where MUD is currently running for free.

by Robert Schiffreen

With Compunet and Micronet now accessible to the Commodore 64, we bring you a new regular column. Each month, The Happy Hacker looks at what's new in Compunet, Micronet and communications networks in general. Got something to tell us? Why not drop us a line us? Why not drop us a line.

tions networks in general.
Got something to tell
us? Why not drop us a line
to: Commodore User,
Priory Court, 30-32 Farringdon Lane, London EC1
3AU — or on Prestel page
number *6001880.

Ironically, there's also a version running on a DEC10 in Oslo, Norway. No one knows how they managed to get hold of a copy of the program, but, through PSS, you can actually play MUD in Oslo. And it can still be cheaper than going through

COMMODORE MICROBASE

The Commodore area on Micronet starts on page 800200, and caters exclusively for the 64. The database was opened to coincide with the launch of the 64 modem — too soon according to some people. The main areas at the time of writing are:

• features (page 800203):- articles about using the 64. A good introduction to using the SID sound chip. Also, a rather sarcastic look at Simons' Basic.

 hardware (800205): looks at Commodors-compatible peripherals.
 There's one section for equipment that has been tested and reviewed by Microset, and one for any that hasn't.
 ICPUG (800201): the Independent Commodors Products User Group has its own pages on Micronet. If you can't find what you want here, try Clubspot on page 810.

on page 610.

• telesoftware (600617):- for the 64 is rather scarce at the moment. There are a few games for downloading, including a range from Supersoft and Ocean. Although cheaper than in the

shops, they're rather outdated. Micromouse is rapidly becoming one of the most widely read areas of Micromet. Run by a database addict, many of his news stories come straight from the American networks and make an interesting read. A good place to find out what else you can do with a micro and a phone apart from using Compunet and Prestel. Most of it's legal, though some stories should carry a BT bestlin warning!

Compunet has retaliated with CompuCat, which is set to develop a similar following.

HOW SAFE IS SAFE?

You can't have missed recent TV and newspaper reports of various lapses in Prestel security. Someone even managed to find the ID number and password of the system manager, which gave access to any area on the database and any user's password.

Last month, Timefame International, one of the most widely read information providers on Prestel, claimed that its ID was 'hacked' just hours after the ID was changed. Why was it changed, you ask? Because of the hack the week before!

certain claimed that they had vidence which proved that this second break-in did not occur, and asked Timefame to withdraw their comments. They refused, and Prestel 'leminated its agreement' with Timefame and removed their facility to use the contract of the contract of

If you use any system, change your passwords at least once every two weeks. In the case of Compunet, make sure that no one ever sees you entering your password or user ID.

Abar Klins Software

John Ransley has ignored (temporarily of course) the sackful of latest and greatest adventures we've hurled at him this month. Why? Because he's going about writing his own brain-twister, confident that, with the right tools, anyone can do (almost) as well as the near-mythical professionals. But how do you think up the ideas and plan them, how do you write the program, design the graphics, speed up the action and smooth out the rough edges? Read on . . .

If you spent a goodly chunk of | to the familiar. In general, | and Dragons. the Christmas and New Year break exploring one or two borrowed or bought, the chances are that you'll have with some aspects of at least one of them. And it's equally likely that you'll have said to

Sure you can. Yet you probably imagine that, whether you're attracted by the idea of creating a text, graphic or way of you ever coming close to the success of Scott Adams. Mitchell: that you lack their creativity and originality, and their programming skills. Well, balrogs to all that.

separately and which you or anyone else can RUN without the compiler itself in memory.

I've been using the disk version of DTL-64 Jetpack (Dataview-Wordcraft, £39.95) for some time now and I can't praise it enough. It's beautifully simple to use and I still find quite magical its power to effortlessly convert any of my Basic programs - however stodgy, inelegant and unstructured - into a sleek beast that's fast-loading, fastrunning and memory-saving.

For example, a Basic subroutine for copying the ROM character set into protected RAM, creating several UDCs and flipping up a screen design incorporating them took 41 seconds to execute.

The DTL version takes nine seconds. DTL boiled down a sprite editor I wrote by more than 2.2K and doubled its speed of execution. And a compiled 32K text adventure not only slimmed down to just over 27K but gave a speed of response that made the game a pleasure and not a pain to play. Also, loading time from disk was cut by nearly a quarter to 75 seconds; tape Incidentally, I could have

tightened up even on these figures if I'd taken the trouble to add just one line to the original declaring which variables (virtually all of treated as integers.

Bear in mind that such improvements will apply also to the speed at which hi-res sprites move (so you can incorporate some real arcade action), and so on.

Another, almost advantage, is that you can write the original Basic program with only one statement per line and with stacks of REMs - so that it's easier to understand (especially months later). This expect a penny from you. is because the compiler ignores all such window dressing and so they won't use up memory or slow execution.

money if you plumped instead around £40 from Codewriter goldfish . . ?

and Stack's new CBM 64 Compiler at only £9.95 on disk must obviously be worth checking out.

Then there's always The Quill. The capabilities of this be familiar to you (if not, reread Roger Jones' thorough appraisal in our December '84 issue). Codewriter's Adventure Writer comes from the same family. Gilsoft have developed an extension for The Ouill which allows for the creation of graphic examples: let's hope there'll be a version for the Commodore family soon. Incidentally, don't let this news delay you from buying The Quill now; the graphics feature will be an add-on and won't replace the

existing product If your funds don't quite stretch to a compiler, you can at least do something to put some zip into LOADs and SAVEs, by processing your self-written programs (whether they be in Basic or machine code) through a utility which will convert it into a fast-loader. Fastback (Micro Centres, £9.95). Hypersave (Dosoft, £7.50) and Zippo (J Morrison lesser or greater degrees of simplicity. A bonus is that

programs so treated can't be

listed or copied. Finally, a word about the use of compilers such as letthem, actually) could be pack or The Quill, Neither you nor any software house which publishes a program created with their help will be infringing any copyright. It's good manners to acknowledge the use of the utilities in the finished program's credit screen or accompanying documenta tion (as does Hampstead, for example, which was written on The Quill). Otherwise, people like Gilsoft and Dataview-Wordcraft don't Which is pretty decent of

them really, when you consider that their prodcts can transform your efforts I don't think you'd be into something which the getting anything more for the likes of Adventure International, Level 9 or Melfor Petspeed (£49.95) and the bourne House could make documentation's pretty pale into a hit. Now, where did I anyway. But Speedwriter at decide to hide the clockwork

COMMODORE USER

(INTERPOD)

COMMODORE 64 ON PRESCRIPTION

by Karl Dallas

Remember the days when chemists' labels used to be indecipherable? The combination of a mumbled consultacoloured liquid bearing the barely readable description saying something gnomic like The Linctus, to be taken as directed", must have been fairly lethal at times

You may have noticed that things have changed, and seem to have become computerised, so you still may not know what you're taking, but at least you can read it

At the beginning of last year (1984), a combination of the professional Code of Ethics laid down by the Pharmaceutical Society and regulations, have meant that all labels on professionally be mechanically printed in some way, and they must carry the following information: the name of the patient, the name and address of the pharmacist, the date, the quantity contained and the warning: "Keep medicines out of the reach of children"

And there's more, the label the product (or, if preferred by the doctor, something more vague like "The tablets", the doctor's instructions on how the medicine should be taken and any other cautions, such as "May cause drowsiness" etc.

cist dispensing at least 1000 width paper, but its memory and more chemists are findifferent products, coping limitations, even in its ex- ding a Commodore 64 set-up 64. with all that was a bit of a panded form, work against it. abolishes the limitations that chore — and indeed Boots the It is also rather slow. Chemists asked for and oballowing them to start

at the beginning of 1985.

This month, Karl Dallas looks at an interesting use for the Commodore 64 in small business. A High Street chemist shop, to be precise, in which the 64, together with a printer and software, is helping to make the dispensing of medicines easier

Commodore in Crewe

A number of chemists use using the Commodore 64 in machine was very fast and ef-the Epson HX20 portable his seven retail shops and ficient it was obviously out of making more efficient use of printer for this purpose. It has found it so useful that he's the grasp of many of Britain's memory.

John Williams originally cartridge slot. Victory.

by Frank Rooney

Watch out, there are some nasty germs about! Oops, too late. Stanley has already contracted a disease. So now it's up to you, the antibody, to stamp out the germs

before they reach epidemic proportions.

To kill a germ you simply have to move into it. You can move vertically, horizontally or diagonally. The type of disease to be combatted is determined by which of the three skill levels you reach. Get to level three and you'll have the dreaded Leptospira Canicola And the neather the disease, the faster the germs multiply.

If the disease gets out of control then poor old Stanley will be forced to resort to penicillin. Your mission will have failed! Full instructions are included in the game.

This is a card game based on the 'Play Your Cards Right' theme, in which you have to decide whether you want a low or high value card. Pairs, full house, flush etc are included and bonus points are awarded for any hands that appear in a winning sequence. You start with 50 points and you get ten attempts to reach a high score or go broke - the graphics and sound are pretty neat, too.

Here's a description of how the program works:

(see over)

Castle Of Terror is a suberb graphic adventure game set in the 1880's when and where "Dracula" stories abounded. You are in a village near a large Castle in which the secretive Count lives. You must travel about the village, collecting items which may be of use to you on your bold mission.

You must also find out what your mission is by talking to the right people. But don't be fooled!

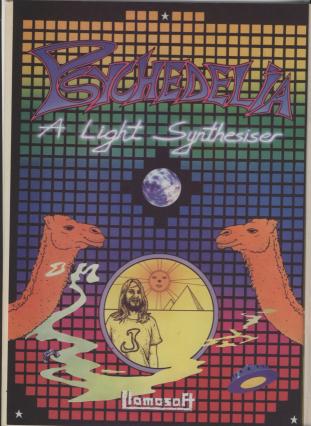

* Superb, highly detailed graphics

and won't be easily accomplished!

 Animated characters, special effects and sound.
 Surviving is success enough, but escaping with the treasure is the ultimate achievement

Operation Salvage

How to recover a corrupted or NEWed program

by Frank Randall

Your average creased and haggard programmer won't hesitate to tell you that not being able to recover a corrupted or accidentally NEWed program is a frustrating experience. To avert premature baldness, here's an easy step-by-step method of overcoming those problems — and it works for both the Vic and Commodore 64.

nyone who has spent a great deal of time entering a program only to find it will not reload from tape knows how frustrating programming can be. There are many reasons for tape read failures. Often the program or part of it is in memory but is not accessible because the internal pointers have not been set up the pointers have been overwritten. They will neither LIST nor RUN. But with a little patience and some fiddling, recovery of either the whole program or part of it is often possible.

Here's a description of the steps to take. The procedure is in the form of a series of Basic commands entered in direct mode. That means you don't need to type line numbers. How it works is explained later. For now, all you need know is that it works equally well on Vic 20s and Commodore 64s.

How it's done
We start by typing in these three

POKE 45, 200:

POKE 46, PEEK

(56) – 1: CLR and

Press Return

POKE 46, PEEK

POKE 46, PEEK

(44)*256 and Press Return - Type FORJ = 1 TO 10000 : PRINTPEEK (A+2) + PEEK (A+3)*256; A:A = PEEK(A) +

PEEK(A + 1)*256 : NEXT and Press Return This will produce a list of pairs of

numbers that scroll up on the left side of your screen. Holding down the Control key slows down the display. On each line the first number is the Basic line number, and the second is the address of that line. Watch for an odd locking line unable that is, one that is out of a line with a zero address. Then press the Runstop key. A slimple example

of the display would look like this:

7096 37168 BREAK

Take the address prior to the zero (in the example, it's 4301), add 2 to it and call the result x. Then you need to enter some more

top 4 — Type A = and the number called x. Press Return

Type POKE45, A — (INT

Press Return

The program should now list and run normally.

(A/256)*256):POKE

46,A/256:CLR and

How does it all work?

To understand how this technique works you need to understand how what pointers the operating system uses. Each Basic line starts with a comparable to the properties of the starts with a rein the usual Commodore low byte

Various pointers are used by the operating system, but those used in the procedures described in this

Start of Basic — locations 43 and

 Start of variables — locations 45 and 46
 End of available memory —

locations 55 and 56

Provided these are set correctly, the others are set automatically by the CLR command.

The object of typing Step 1 is to set the end of Basic pointer to an artificially high value so that when the later commands create variables they do not overwrite the program to be restored. Step 2 initialises variable A to point to the first Basic line, and Step 3 is the loop which converts the line number, prints it and the address in A. and sets A from the link address in that line. Basic programs end with a link address of zero, hence the need to add 2 to the address of that line before typing Step 4. Step 5 formats the adjusted address to low/high and sets the pointer in locations 45 and 46 ready for the CLR

Salvaging a corrupted program

If the end of a program has been overwritten such that the zero link

address is missing, an extra bit of work between Steps 3 and 4 will salvage most of the program. It is important to avoid listing the program if this is suspected as this may result in the system crashing.

may result in the system crashing. Go through the procedures outlined above up to and including Step 3 and watch out for an out of sequence line number which is where the corruption starts. Subtract 1 from the address of that line, call it x, and then:

rep 6 - Type POKEx,0:
POKEx+1,0:
POKEx+2,0 and
press Return

Remember to type the value of x, not the character 'x'. Add 3 to x and then continue with Steps 4 and 5 as described above. Part of the last line of the program salvaged in this way may be rubbish but it can be edited or replaced in the usual way.

Recovering from NEW

Another use for this technique is where the initial link has been destroyed by typing NEW. To recover the program in memory, type Steps 1 and 2 and then:

Step 7 — Type FOR J=ATOA+255

PRINTJ : PEEK(J) : FORJ1 = 1TO100 : NEXTJ1,J and press Ignore the first four bytes, watch for a zero byte and then press the Runstop key. Call the address after the zero byte x, type the command at Step 2 again and then:

> - Type POKEA,x-(INT (x/256)*256): POKEA+1,x/256 (remember to use the value for x) and press Return

The missing link address will have been restored but Steps 3 to 5 must be taken to restore the other pointers and the job is complete.

A few minutes spent fiddling in this way could save hours of

The Comprint Epson/Centronics interface reviewed

by Chris Durham

Commodore users have always mourned the fact that only a Commodore printer will plug straight into their computer. Using a non-Commodore model means buying an interface adaptor. But which do you choose? It might be easier if there was a special interface available for the printer you want to buy. Like the Comprint interface from Micro Control Systems, especially designed for a Commodore 64 and an Epson or Epson-compatible dot matrix printer. At £61.99 it's not cheap but it allows you to use that coveted Epson. Chris Durham plugged in and used it to write this report.

modore printers have been be attached to the Com- 'format strings' which deteraround for almost as long as modore home computers, mine how lines are printed. the computers they work with; particularly for use with Such a beast is the Comprint for the simple reason that wordprocessing programs. Commodore home computers use a non-standard method of did the character conversion serial communication for necessary, without allowing their printers. The common the user to print the Comstandard for most cheap modore character set. Later printers is Centronics models actually allowed the It is designed to fit inside parallel, with RS232 serial Commodore character set to an Epson (or compatible) coming a more expensive se-cond. While the new Com-'reversed graphics' that Commodore DIN-plug lead modore printers are catching represented the control connecting it to the comup on the quality and value codes. Now, we have interputer; in other words exactly for money at the lower end of faces that not only do all this, the same as a Commodore the market, there's always but convert the control codes printer. Not only that, but it been a demand for interfaces into readable strings, make has two serial port sockets, that would allow 'near letter | the printer act either like itself enabling you to connect a sequality' (NLQ) dot-matrix or as a Commodore printer cond printer/plotter without

ordprocessing programs.

The software

method is not always the same. Under normal circumstances you would continue printing on the channel that you opened until you had finished, but Comprint is different in that some 'channels' are for commands only; you can't send any text on them Thus OPEN12.4.12: PRINT # 12: CLOSE12 sets the

'control code conversion' mode; you still have to send the listing on logical channel for example, OPEN4.4: CMD4: LIST. Table 1 shows the control code conversions (just what you need for Victuals). Table 2 shows all the facilities available on the ing at. secondary addresses. There is even an option (4) which will tell you what the errors are if you make a mistake in the

The format control is worthy of mention. This allows you to preset the form that a printed line will take, both numeric and textual. It can be used to set up columns of £61.99 (incl VAI) cess. This means that when figures, truncate strings to the

clever

other commands - very

the manufacturers come up same size, format a date correctly or even produce included in the format that

The instructions

With such a wide range of The facilities are all con- commands it is vital that the instructions allow the user to get maximum benefit from the interface. While some of the printers will know that this is a facilities were clearly explained, others were passed over with little explanation and no examples. The new commands, using secondary Commodore printer in lower addresses 12 and 13, were on case mode, where '7' is the an Addendum sheet that was very unclear. However, I am assured that the new instruction book will be much clearer and will include more examples. The only way to really get to know what this beast will do is to try out all the examples and options. It won't be a quick trial, there's far too much to learn, but once you have mastered the facilities, there seems little you won't be able to do.

Conclusions

This is one of the most versatile printer interfaces I have used. It offers a wide range of facilities which include printing the full Commodore syntax, but unfortunately the graphics set, converting the control codes to meaningful strings and being able to format the printed output as you wish

With your Commodore computer, your Epson printer and Comprint you will have a combination that will do almost anything you ask of it. For those who do not own an Epson. Micro Control hope to market versions for other printers too. At £61.99, I consider it good value for money. My one proviso is that the problem of resetting the computer when anything on the serial bus is turned on needs look-

CHALLENGING

WARRIOR

Part 1 — taking the first steps by Brian Grainger

Did you get a new Commodore computer for Christmas? Have you owned a computer for some time but use it only for playing games? Maybe you think it's time you started programming? This is the start of a four-part Basic tutorial for the absolute beginner, taking you gently through the basics of Basic. This month Brian Grainger shows you how to write a simple program to produce a message on the screen and some graphics. So let's get going . . .

Remember the day you open- something educational, but it does nothing else but ed the box of your brand new Whatever it was, each of write letters. Your computerfirst thing you probably did makes a computer such a was to load a program from useful thing. the cassette given or bought. In the past you bought a own programs and get your

Commodore computer? You these different programs gets can do all these things. It's the plugged it all together with the computer to work in a dif- program which allows you to your TV and turned it on. The ferent way. It is this that choose what it does. to teach you how to write your

used a computer program. shoved it in the cupboard. It may have been the latest There may be a typewriter in game, a drawing program or your home for writing letters

The purpose of this series is

with the machine and ran it. game, like Monopoly, played computer doing what you This is the first time you have it a while, got tired of it and want, so it will never join the Monopoly in the cupboard.

What is a program? Let's consider a simple everyday function like watching the telly. You may not realise it but you're probably going through the following steps to

- do this simple task: look at the paper to see what's worth watching,
- and make a choice turn the television on select the right channel
- if the volume is too loud or too soft then change it watch the programme
- keep watching the pro-gramme until it is finished, or it's time for Dallas if you want to watch som
- thing else then go back to selecting the channel · if you do not want to watch anything else then switch the television off

The above is a set of instructions to tell you how to watch the television. I could just as easily have given another set of instructions to tell you how to get up out of bed and prepare yourself for school or work. In other words, you're following different sets of instructions for different tasks. Just like the computer.

A computer program is simply a set of instructions to tell the computer how to do a particular task. Like the example above, the instructions are performed in sequence

a question, for example, means that we must jump to another point in the sequence.

The Basic language

Let's consider another point. If I gave the above instructions to a French person and told him to carry them out, he probably wouldn't know what to do because he did not understand English. So for him to understand I would have to write the instructions in French, a different

given after the word HELLO. First of all change line 10 as follows 10 PRINT "HELLO":

You can do this by typing LIST 10, and then moving the cursor with the keys marked 'CRSR' to the point at where a change is required. Then overtype with the change, the screen. But we can also Press RETURN when the line print the graphic characters is right and the line stored in displayed on the front of the memory is changed as well.

COMPUTER" Type RUN and see for yourself that the program does what can be printed.

A graphic program In all the examples above we have just printed words on to mote marks

You will find that special symbols are displayed on the screen when you do this to show that the appropriate key is pressed. Some special symbols are visual representations of the control code being printed. These visual characters are usually reverse field graphic characters such as reverse field 'heart' for <CLR> — ☐ Just about any Commodore key except 'DEL'

Below is an example of a program that will print a red square in the middle of the screen. Use the panel to find out how you get the various graphic characters:

LOAD and SAVE

point about programs. Once they have been stored in memory they only stay there as long as the machine is switched on. We must have a means of storing them somewhere else when you turn the machine off.

If you want to store the program that is in memory onto cassette simply type: SAVE "PROGRAM NAME". The words in quotes can be anything so long as they contain no more than 16 characters. They are used to identify different programs stored on the same tape or disk.

To save a program on the 1541 disk drive, we type in-stead: SAVE "PROGRAM NAME",8.

Having stored the program on cassette or disk we can Commodore keys. We can There is one very important now safely turn the computer

"revise the program so that the computer will print the name given after the word HELLO"

program the next line (I AM A COMMODORE COMPUTER) sor around the screen as well. was printed on the next line. Because we have added a ':' text we have just printed.

Finally we add a new line: 15 PRINT NAS

This will print the contents of the 'box' labelled NAS. We know this contains the name of the user. By giving the line a number

15 it will be obeyed after line 10 but before line 20. We have inserted a new line in the program.

We now have the full prom as follows INPUT "WHAT IS YOUR NAME":NAS

10 PRINT "HELLO": 15 PRINT NAS 20 PRINT "I AM A COMMODORE

With line 10 in the original change the colour of the text or graphics or move the cur-

To do this is simple. Just press the appropriate key with at the end of the line the next SHIFT (for the left side item to be printed will be character) or the COMprinted, not on the next line, MODORE KEY (for the right but immediately following the side character) within the

off. Next day when you want to get your program back into the computer you load it into the computer from cassette by: LOAD "PROGRAM NAME", or from disk by: LOAD 'PROGRAM NAME".8

There is another way of removing a program from store without turning the machine off. Simply type NEW. When you do this you can then start a new program on what is effectively a clean computer store.

Now is the time to test whether you have understood everything so far. Before next time have a go at trying to write a program which asks for the user's name and then prints both a smiling face and a welcoming message. Phew, time to take a breather - see you next month

Koch

The Forth Dimension: Programming with a DIY Language

Part five — take a piece of string . . .

by Richard G Hunt

Handling numbers is important. The only aspect not so far covered in this series is input via the keyboard. This and string handling (including the input counterpart) is the subject of this article.

String handling is a little this definition uses FIG- the string to a safeplace it may support a word like #IN, say non-existant. This does not mean that Forth is defective, merely that, for example, string variables as in Basic are not required. Forth relies on the ASCII table. which of course is numeric. So to output a character string the word EMIT is used which requires the appropriate ASCII value as a parameter on the stack->89 EMIT < Y OK (Remember DUMP which had

the word ASCII defined using EMIT in a loop?) Programmed text may be

output using [."] (dot quote):
>." Here is some text" < RETURN > HERE IS SOME TEXT OK

The final quote mark is not a Forth word but a delimiter to the text. Note also the mandatory space between [."] and the text.

With both EMIT and [."] most string output routines can be handled. Input is a little different. The building blocks exist in Forth but there is usually no pre-defined word to get input from the keyboard. So we must define a word like INPUT\$ ourselves. Fortunately this has been done before and as I decline to re-invent the wheel, or IN-PUTS I have drawn on several sources to provide this working definition, and it seems to me a reasonable consensus:

tenuous in Forth. Some would Forth, and that other implementations, even perhaps of FIG-Forth, may differ in some detail. Do check your system Having input the string we documentation regarding WORD. On Forth-79 the this: variable expression may be exchanged for > CREATE STR\$ 80 ALLOT < which has a similar effect. The definition [-TRAILING] causes trailing of VARIABLE does indeed use spaces to be omitted from the CREATE to allocate dic- string output by TYPE. If you

tionary space for the entry to follow, which consists of a cell (two bytes). ALLOT turns STRS into an array of the First input a string to INPUTS. specified number of bytes (here 80 in all as VARIABLE already has allotted two bytes). CREATE requires the full number of bytes to be allotted. So far then, we have made a space in the dictionary for an array of 80 bytes, which should be long enough for most purposes. Next FILL ensures that the

array is cleared by filling it with blanks (ASCII 32) -STR\$ leaves its address on the stack which followed by the count and character code is acted on by FILL. A prompt (>) is displayed. QUERY accepts a line of input up to the end of the line or a carriage return, and places the string

in a temporary area whose address is indicated by WORD any value may be substituted, help by writing a Forth HERE. The number 1 is a "null" delimiter required by WORD.

It may be changed to 32, say, which will cut the string off at the first space. COUNT organises the address of STRS the stack and finally by character to the address (and reserved area) left by

CMOVE removes it character There are lots of new words STRSS. This part is necessary Numeric input requires the

would be corrupted. Stringing out need to output it again - like

: OUTPUT\$ STR\$ 80 -TRAILING TYPE ;

are in any doubt as to whether INPUTS works use DUMP to where. examine STR\$ in memo then enter: >STRS 'U. <. The system will indicate an

address, for example, 7101 OK. Now enter, say: >7090 7130 DUMP < and the ASCII display will show the individual letters of the string following the Name Field Parameter (NFP) of STRS. KEY is most often used to get a single character from

the keyboard. For example the common Basic routine: 500 GET AS: IF AS = " " THEN 500 510 IF A\$ = "Y" THEN . . .

becomes in Forth : GETAS BEGIN KEY 89 = which suspends execution un-

til the key with ASCII value ble with multiplication 89 is depressed. Obviously tables. I thought to try to (space). A page routine may the following procedures: look like this:

: GET\$. "Press SPACE to continue" BEGIN KEY 32 = UNTIL 147 EMIT: So much for strings. You cannot imagine how they tied me up in knots.

Numeric input

otherwise you can define it in much the same way as for string input:

: INPUT 0 0 CR . ">" QUERY 1 WORD (NUMBER) DROP DROP :

INPUT uses (NUMBER) or CONVERT on some systems to ensure that a number is left on the stack. The rest of it is as before except that it is not necessary to move the input as the stack is as safe as any-

Input of a number is often associated with choice within a legal range of numbers. Forth makes this easy with MAX and MIN both of which require on the stack the number to be checked (n1) and the legal limit (n2). MAX returns the greater and MIN the lesser, so in backwards Forth style the upper limit is checked against MIN. For

: LEVEL INPUT 10 MIN 1 MAX :

which allows input of any number but will pass on for further processing only a number between 1 and 10. Now for a simple exercise. Last year one of my daughters was having trou-

 defines and resets a variable CHOICE

· gets input of a number and stores it in CHOICE · clears the screen, prompts for input and displays the "n times table" formatted neatly in columns (using 'R' or 'D.R' and [."].

Try to Do It Yourself, but and quite a lot else to explain because HERE changes all definition of a special word remember to keep it simple. here. First I should stress that the time and without moving like INPUTS. Some systems My solution next time.

VARIABLE STRE 78 ALLOT

I INPUTS STRE 88 32 FILL ." >" QUERY I MORD HERE COUNT STRE SUMP CHOVE !

50 Designer's Pencils To Win

Putling graphics up on screen can be a tricky job for the non-professional programmer, To make it slightly easier a number of graphics software packages have been launched recently. One of the best of these is Activision's excellent Designer's Pencil. We have fifty copies of the Pencil — worth \$9.95 each — to give away in our simple-lo-enter competition.

The Designer's Pencil is Activision's first foray into utility programming and — if the quality of the graphics tool is maintained the future looks good for 64 owners.

Activision established themselves two years ago as the leading American video games company — writing games for the Arari VCS

Their conversion to the computer has been about the only successful transition that a leading video games company has made. All the others have gone bust or faddlists observible.

Games like Pitfall I and II. Decathlon, Zenji, and Ghostbusters have kept Activision in the top five of computer games companies in the world. Much of this knowledge has been incorporated in the Designer's Pencil.

The Pencil uses a programming language called PROG. Options are chosen from a menu with the joystick. It's all simple to

The competition is not open to employees of EMAP Business and Computer Publications. Entries should reach this office by no later than 15th February 1985. The editor's decision is final and no correspondence will be entered into. use and easy to understand. Unlike standard drawing programs the Pencil also includes the option to use sound functions of the 64.

As well as choosing options with your fire button you can also use the joystick to draw free-hand directly on to the screen. The Pencil shows you all the programming that is required to create a graphic as you draw it through a window on the screen.

Winning a copy of the Pencil is as easy as using the Pencil itself. All you have to do is complete your general knowledge quiz on designers and send it off without delay to Commodore User. Priory Court. 30-32 Farringdon Lane, London ECTR AAU. Entries by 15th February please.

From Paintpots To Pixels

To get the most out of the graphics capabilities of you Commodore 64, you'll need to buy some graphics software, and there's a lot of it around. Generally, products fall into three categories; graphics editors that let you design characters and prites, extended Basic packages that specialise in graphics commands, finally there's fully-fledded in-res drawing packages, Dermod Williams has sampled a few products in each category— and has in each category— and has

Main picture shows one of the pictures you'll find on Doodle's demo program, so good they put it on the package's front cover.

Sports car, sailing boat and steam engine, courtesy of Activision's Designer's Pencil. The fourth illustration shows a multicolour sprite being created on Supersoft's Graphics Designer package.

by Dermot Williams

Graphics Editor is available currently only on tape, and it costs £14.99. Plans to release it on disk are still in their early stages. As its title suggests, the program allows you to design your own graphics in three main areas: characters. sprites and screens. The proloading and displays a menu of the three above options.

So let's start with defining characters. The character heing edited is displayed both on an 8 by 8 grid as well as in normal size. The complete character set is also displayed at the bottom of the screen for reference. In addition, groups of characters can be viewed together in a 'viewing window

To edit the character you tion the graphics cursor around the grid, turning pixels either on or off. The program also provides commands for working on the character as a whole. So you could clear it, invert or flip it vertical axes - even scroll it

vertically or horizontally. The 'M' command gets you into multicolour mode However, the grid doesn't operate in multicolour; the character on the screen is still 8 by 8 so to choose the colour of a multicolour pixel, you

must edit two bits. That leads us on to sprite design which uses the same general method. The sprite is well as in its four normal sizes. A display window allows four sprites to be view ed together.

Generally, you get the manipulating commands as for the character editor, but either the keyboard or a joythere is one extra and useful stick. Like the Romik feature. You can display a package, there's a wealth of series of sprites in the display commands to manipulate the window, making it easier to character in various ways. design animated sprite you can clear it, flip it around

allows screens of user defined To design shapes of more tape or disk. The manual incharacters to be composed. A than one character, you can portion of the screen may be define a window of up to 32 lefined as a 'block' to be mov- characters. This is displayed ed, scrolled, and inverted just to the left of the grid, the next

Having designed your ing automatically brought on character, sprite or screen, to the grid, allowing you to you'll want to include them work on the whole window in your programming. Each easily. Commands such as section in the Graphics rotate and flip may be applied Editor allows the user to either to the whole window or save his or her work on to only the current character betape or disk. The manual, ing edited. which is clear and easy to

follow, includes a short features a multicolour mode. routine for loading those Here, the cursor doubles in files for inclusion into your size, and at the side of the own Basic programs.

like sprites and characters. character in the window be-

Graphics Designer also

cluded has a neat little program for transferring your incorporate your designs into

Finally, which one should you choose? If you don't really want or need the screen editor in Romik's Graphics Editor, Supersoft's package is generally easier to use and a little more versatile for sprites and characters - it's cheaper

There are plenty of packages around that extend the Basic commands available to your Commodore 64. Most of them, though, give a range of commands that cover graphics and a whole lot of other facilities. Graphics IV is one of the few programs available that specialises in graphics, adding 19 extra commands to Basic. It comes on cassette

only and costs £9.99. Eight of those commands are dedicated to hi-res graphics. The HGR command selects hi-res mode, giving the option of a four-line text window at the bottom of the screen. HCLS clears the hires screen, and COLOUR MOVE, DRAW and PLOT allow points and lines to be

drawn. PAINT covers areas with colour and PUT allows text to be incorporated on the hi-res screen.

When the package is loaded, it automatically copies the character set into RAM so the user can easily define them In fact, the CHARACTER purpose. CMODE selects which character (upper case/graphics or lower/upper case) your commands are

Other commands are save commands have been BORDER and BACK. named OLD and KEEP. GROUND for defining the

operating on.

The first screen you see when you load Talent's Panorama (H) is the main menu. showing its extensive range of one and two letter com-

Supersoft Graphics

This package is a little cheaper than Romik's, selling and £11.95 on disk. Graphics Designer has two options, allowing you to design your own characters and sprites.

Let's start with the character editor, which displays a large designing grid as well as the whole character set. To work on the grid you can use either axis, invert, scroll and

ing. So there's no bit twiddling to do - it's very easy to On to sprite design: here the grid is larger and the current sprite (like the Romik package) is displayed in each of its four possible sizes. The sprite is designed and edited on the grid using the key-

selected colours,

pointer that indicates the col-

and

Funnily enough, load and

astly, the screen editor rotate around 90 degrees. Graphic packages for the 64

From Paintpots To Pixels

colour of the aforementioned, you fill any enclosed area CURSOR for moving the text cursor to any x,y position on chip. This is what happens when the screen blanks during a cassette or disk operato use hardware which has timing problems with the 64 such as the old Vic 1540 disk drive.

Unfortunately, for a utility devoting itself entirely to extending the 64's Basic for graphics purposes, Graphix doesn't really have enough commands. The ones it does have are fast and easy to use, but a complete Basic extension, like BC Basic at £19.95 on tape. may be a better buy - it offers the same and a whole

> HesWare Graphics Basic

lot more

This is a much meatier package incorporating 100 additional English language commands to Basic. Unfortunately, it is available only on disk and costs a mighty £27.95. Although the package describes itself as being dedicated to graphics. it offers not only commands for creating hi-res graphics and sprites, but for animating sprites and producing synchronised sounds

The package operates in three screen modes: text, hires and multicolour. Text mode lets you list and edit programs, and hi-res and multicolour allow graphics to be displayed and programs run. Modes can be switched simply by typing the appropriate command. Function keys are also implemented for quick use of commands like Run, List and Dir.

The Border and Background commands let you change colours, whilst Line draws a line from two specified points in the x v to x,y format. The same goes for Circle, which produces circular shapes and arcs. You specify the x,y coordinate of the centre and use the XYSIZE 'EL' would draw an ellipse. command to specify horizon- There's a status line display at tal or vertical radii. FILL lets the bottom of the screen call-

with colour, specifying both the colour and the mode in the screen, and BLANK/UN- the program line. It's also BLANK for inhibiting the Vic possible to print text on a graphics screen using GPrint.

On to sprites, which can be tion and is useful if you want created and moved. The sprite editor has a 24 by 21 dot grid on which pixels can be turned on and off - the actual size of the pixel is also displayed. Sprite shapes are included on the disk. There's also a useful example to show you how to incorporate your creations into a program and

how to move them around. That takes us to creating sounds: you can turn on and off automated sounds, choosing any of the three voices and setting the ADSR envelope. Also included are commands for selecting the possible waveforms and for setting the volume. Lastly. you can print a hi-res or multicolour image to a Commodore printer or a Gemini

The package comes com plete with a 120 page manual that not only comprehensively lists, describes and gives examples for each command, but also provides a useful tutorial section at the beginning. Graphics Basic is expensive but it gives you much more than commands for creating

series printer

Resolution Craphics

Panorama from Talent Panorama is a hi-res graphics package that comes on tape (£17.99) and on disk (£19.99). On loading, the screen displays the 34 available commands. Any command is operated by typing its one or two-letter mnemonic. For example, 'L' draws a line and

rectangular or irregular blocks can be defined, which may then be textured, coloured, mirrored, erased,

copied and moved. The memory retains four different colour schemes so you can experiment easily with colour. The EX command selects which colour scheme to use to display the pictures on screen. The picture may be married to be a complete material colour scheme to the colour scheme to the colour scheme to the colour scheme to the colour scheme to tape or disk and also verified, merged and loaded.

Generally, the system of using mnemonics to operate the commands in Panorama take a long while to get used to, but with a little pracyou can work quite quickly. One sore point is that after each command has been entered, the computer gives either a 'pip' to indicate it was correctly entered or a wail if it was wrong. Audio feedback is a good way of highlighting errors but the constant 'pips' will have you reaching for the volume control - so you can't hear the mistakes either.

Doodle from Quicksilva

Quicksilva is now marketing
this American product in Britain at £14.95, around half the
US price. Unfortunately, it's
available only on disk.

After loading the package you get a 'greeting' screen followed by the main menu. This lists the ten modes in which Docoffe can operate — Sketch, Line, Boxes, Circles, Colour, Zoom, Copy, Stamp, Letter, Disk and Print. You can change mode at any time using the function keys and instead of the main menu, the respective mode menu is displayed. Return toggles you between the menu and draw-

ing screen. Each mode menu lists the commands available in that mode, in an uncluttered mode, in Sketch mode, you move the cursor at nine different sizes. You can fill areas with colour, invert the screen, lip the screen around the

ed the 'crib' which displays among other things, the current x,y position of the cursor. In fact, you have a choice of three different types of cursor: an arrow, a gunsight or nothing at all.

The spacebar toggles the display between the menu screen and the picture you're working on. You can use either the keyboard or a joy-stick to move around the screen one pixel at a time, and the function keys can be used to move the cursor in eight-pixel jumps.

As well as drawing individual points, Ponoramo will draw and erase lines, circles block' can be defined (much the same as on an Apple Macintosh) and used to add texture to your drawings. Used with a little practice and imagination, this can become a powerful command. either

SPECTRUM

SIMULATOR FOR THE COMMODORE—64

If you have a Commodore-64 microcomputer, this brilliant program will allow you to use virtually any Spectrum BASIC programs without modification!

Just think of iti — your programs will think you really have a Spectrum! Because your of has a proper keyboard plus R\$323, disk-handling, and serial port facilities, we are throwing in a lot of the features of ZX-Interface-la well.

Only £14.95 with manual in turbo-tape format

From Paintpots To Pixels

vertical axis and save the inserting lines into the pro-

drawings. Line. Box and Circle modes are similarly laden with easyto-use commands, with as choose various drawing commany functions as possible accomplished by the joystick. Left, Right, Circle, Kaleido-Colour mode selects the fore and background colours for working in, and sets colour for changing background and cells for these colours. Zoom drawing colour, setting the allows you to zoom in on any part of the screen making single pixel editing much pagier

Stamp lets you create 'rubof your drawing which you can stamp anywhere on the screen. Copy lets you copy larger areas which have been defined in Box mode. The area can be saved to memory, be enlarged or rotated

Finally, Disk and Print mode loads and saves to disk, and prints your masterpiece - not only on a Commodore printer but other popular models like Epson, Okidata and Star, providing you have Centronics interface adaptor.

In conclusion Doodle is not only easy to use, it's great fun as well. The manual is clear and concise and the mode screens informative. It really is child's play to use.

Activision's Designer's Pencil

The Designer's Pencil package refuses to fall into any strict graphics category because it throws aside Basic in favour of a programming technique' it calls PROG, in which you string together sequences of commands. The package costs £11.99 on tape

and £19.99 on disk. On loading the program, you're confronted by the Programming Screen, a screenful of commands divided into four sections: master commands, programming area, instruction set and prompt window. Moving around is done by either keyboard or joystick.

The master commands let you do routine jobs like runnthe program you've built.

whole screen to memory for gram, deleting, clearing the later recall. You can even screen and filing your work. superimpose a grid on to the The Prompt Window helps screen to help you plan your here and it gives you access

to twelve demo programs That takes us to the Instruction Window from which you mands, like: Go Up, Down, scope on/off, Pencil on/off etc. There are also commands drawing speed, moving forwards, backwards, rotating, drawing diagonals, producing sound and music.

You use the joystick to ber stamps' of small sections scroll through the commands vertically, positioning the 'arrow' cursor by the one you want. The same goes for the program lines on the left side of the screen. To create a circle, for example, you'd use the Circle command, which entails specifying the radius the format being 'CIRCLER = 112'.

With all the draw commands, you can specify variables 'A-Z' instead of figures. As in Basic, instead of just using one value, your variable can have different values throughout the pro-gram. You can set up program loops, and there's a Jump command that works in the same way as a Goto in Basic. That gives you the provision for animating parts or even the whole drawing.

Finally, it is possible to print your creations and pro-gram listings on a Commodore 1526 or MPS 801 printer. If you're lucky enough to have an Okidata Okimate 10 colour printer. you could use that too

It's clear that The Designer's Pencil is a very sophisticated package; just looking at the Demo screens with the 'pencil' whizzing around furiously is enough to inspire enthusiasm. But this is no 'pick up your joystick and draw' program, it involves actual programming and the commands used are initially just as daunting for the beginner as Basic itself. The trade-off is that this package will provide facilities for even the most hardened enthusiast.

The Complete

Deals For Readers 01-241 2448

Save over £50.00 in this month's catalogue with a wider range of deals on the best of Vic and 64 products.

Some of them, like the dustcovers and the Victuals tapes, we have produced ourselves. The others are things that we regard as Good Ideas and Good Value, mostly items reviewed in Commodore User.

On most of those we have fixed up discounts for readers (and while we aren't allowed to sell books at cut price, we can include P&P in our price)

If you want to take up any of the offers, just use the Order Form on the back page.

excellent screen design! All the programming information you need to

Howard Stanworth, Commodore UK boss, interviewed by Bohdan Buciak

A great deal happened at Commodore last year. The company released two new computers, the 16 and Plus4, it moved to new and more prestigious premises in Corby, it received the Royal Warrant and saw the Commodore 64 yet again being voted 1984 Home Computer of the Year. But Commodore UK boss, Howard Stamworth, insists 1's nothing to be completent about. So how does he see the competition, how does he view Commodore's expansion and its increasing need to offer better customer service, and what's in the pipeline for this year? Bohdan Buclak trecked up to Corby to ply him with these questions.

Howard Stanworth doesn't profess to know a great deal about the technical ins and outs of computers, and be didn't get to sit in the big chair at Commodors because he's a technical genius (like Clive Sinclair?). He describes himself as an out and out manager." It spent about seven years in managerial positions in the hi-fi and TV industry. I left that for un a plastics company, and then I spent three years as a director of Unigate Dusines."

But he reckons his experience and his eagerness to get back into 'consumer electronics' gave him the best credentials for the job. "There's a strong connection between hi-fi and home computers. Both have grown out of their buff origins into mass-market industries." But it's more the diferences that interest him. "Computers are more exciting; with hi-fi you have a passive relationship, computers give you scope for personal inventiveness" — more about that later.

Happy New Year

Last Christmas saw the cash registers ring out again for Commodore and, although Howard Stanworth will neither brag about that success, nor reveal how well Commodore actually did, he will say that the Corby plant was working "absolutely flat-out" sixteen hours per day, seven days a week to meet the demand for the whole of

Not surprisingly, the Commodore 64 remained the apple in Commodore's eye, accounting for the largest proportion of sales. But with the Christmas period over, is Commodore looking to cut the 64's price at some stage this wear? Howard Stanworth's answer is

firm but disappointing: "There won't be any price reductions. You won't see prices going down like last year but you will see manufacturers putting in more features, more power — better value for money."

Sweet 16?

That brings us to the Commodors Iô which, selling at the same price as the Vic, must surely have made people in Britain turn their noses up at that Britain turn their noses up at that Sansworth has a surprising revelation. The Vic is still in production here, but we're producing more for the world market. We won't stop producing until the demand ceases. That should ensure that existing Vic cowars won't go are that existing Vic cowars won't go

But how well did the 16 sell over Christmas and will it ever be as popular as the Vic? Again, Howard Stanworth is loathe to reveal sales figures: "It made a remarkably spirited entry into the market, and everything we've produced has been sold before it

left the production line.

"I think the 16's success has taken a lot of people by surprise, excluding us. Many software houses said there was no longer a market for a 16K machine. We've proved them wrong, and at least a dozen software houses were getting a range of software ready for Christmas. Of course, we have a range of titles of

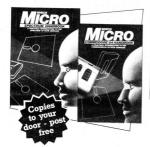

So it looks as though Stanworth's faith in the 16 has paid off, despite innial criticism that the description in a criticism that the second in the second

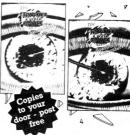

16 starter pack gives you just that."
The 16 and Plusú A have allowed
Commodore to offer something both at
the bottom and the top end of the home
computer market. So how well has the
Plusú been doing? Again, Stamworth
shows characteristic reticence. "All I
can say is that our expectations of demand for the machine have been
filtilled, but we've not been able to
supply all the demand." And that's
elenothy way of not saying nuch.

Weighing up the competition

Despite all this vagueness, it looks as though the Christmas spoils were split fairly evenly between Commodore and Sinclair, establishing both at the very top of the market. These two are now seen by users as the right products to have. Nobody likes to think they're buying a dead-end product. They want to be sure that they're buying from a company that's going to be around in-definitely"—a typically cautious way for Stamworth to say that Commodore is

But so is Sinclair, always ready to do continued on page 73

Britain's two most popular personal computers, the Commodore 64 and Spectrum are covered from basic to semi-expert in Which Micro Magazine's Handbooks.

Author Pete Gerrard, a regular columnist for Which Micro, has put together an accurate and practical guide to both computers, at £4.99 per book.

Many programs are included and both 160-page books are spiral bound for easy use and are available in all good bookshops from by filling in the coupon below.

Computer and Video Games, Britain's most popular computer games monthly, bring you two exciting new books for the Spectrum and Commodore 64.

Each 100-page book contains up to 30 brand new games checked and prepared by Computer and Video Game's regular contributors

At £4.99 - the best value on the market at all good bookshops from October 26th, or direct October 26th or direct through your letterbox through your letterbox by filling in the coupon below

MAN AT THE TOP

battle: for example, its Spectrum Plus with its real' keyboard, was probably designed to make prospective Commodore 64 buyers think again. But Stamworth was not shaken: "I believe the customer is sufficiently educated to know that \$50 extra for a keyboard is not good value". Or, to put it another

way, you'd be silly to buy one.

On the other hand, the Amstrad
machine does display very good value,
but Stanworth doesn't see that as a
serious contender either. "It hasn't got
the distribution to affect our sales
seriously." By that he means you won't
find it in as many shops as the Commodore 64. Whether he feels it's better

than the 64, he's not saying.
And that brings us to the people
backing MSX, who must have spent a
fortune bombarding you with adverts
during the Christmas period. Howard
Stamworth is more prepared to be outspoken here: "Criticisms that MSX is
yesterday's technology and that it's
over priced are both alsolutely valid
bas recompised that.

"The Japanese are adopting the same tactics they've used in markets like hi-fi — producing established technology very well to try and get a market share. But I'm not complacent about MSX because you can't be sure what they'il do next year. They're gaining experience — but iff's painful. We're not worried now but we don't take Japan lightly."

take algaba induty.

Servicing the user

With Christmas over, the number of people owning Commodore computers has increased again by leaps and bounds. That may be good for Commodore but not so good for its customers who need service and support, an area in which Commodore already has a less than admirable already has a less than admirable surrough the commodore that the commodore is the commodore of t

to give us growing pains." That may sound like an excuse, but Commodore did have moving to a new location to contend with. Still, can he assure new customers that they'll get the kind of support they need?

"We're not only keeping up but improving our service capability. We're now in much better shape to cope with the post-Christmas service requirements this year than last." In what way? "A lot of changes have accompanied our move to the new factory. We now have a customer repair turnover of 2-3 days. People don't realise that most of the delays occur when the computer is travelling to and from us. We've also got more technicians, better equipment and better administration to deal with those repairs." It sounds good whether it will work out in practice is still to be seen

Many people, though, just want help Many people, though, just want help with technical problems. What's Commodere doing to smooth these troubled brows? Again Stanworth has an answer ready. What we moved here, we want to be a supply to the supply of the and created grades for which our advisors had to qualify. They have to be able to explain technical things in a non-technical wer.

"But you have to draw the line somewhere. Given the nature of our business, I don't think we'll ever be able to answer all the questions thrown at us. There are extraordinarily bright users out there — and lots of them." To overcome that problems, Howard Stantown of the problems which will be passcommodors UK with their highly technical problems which will be passed on to the Technical Department.

Future prospects

Having achieved so much already, what more success is still to be gained? It's rumoured that the company wants more success at the business end of the market. "Yes, we want to re-establish our presence as a front-runner in business computers. But that won't be detrimental to the home market. It

believe that the markets are converging — in twelve months time you won't be able to make a rigid distinction between the two, both in technical specification and the way they're sold."

And the computer that may bridge that gap is the temporarily-named 'Lorraine' computer from Amiga, the American company Commodore has just bought out. Not surprisingly, Stanworth is keeping all the juicy details under his hat. "We don't talk about future products in detail;

One future stee Stansorth will take about in Computer. He sees it as one answer to claims that the home computer market it swell and truly saturated. "Communications networks and machine to machine communication is the next reason to buy a micro." The very excited about Compuned and the ways it can be channed. If seein got probe that the work of the computer of th

"But for most of us, it's a whole lot of fun because everyone can play. You're not just led information, it's a community and a method of expression people can put up what they like. That means Compunet has an organic life of its own. and that's what excites me."

Obviously Compunet is looking to attract lots of users and there is no inherent limit to its size. But, according to Stanworth, "Its success will not depend merely on the products and services available but on the inventiveness of its users. The software market has thrived on the inventiveness of usually young people — so will Compunet."

Howard Stanworth's view seems to be that the home computer market will never reach saturation point because there will dways be recusors for people to buy them. This year the main cutraction may be communications networks. Next year, there'll be different built on the hook. If Howard Stanworth knows of the work when the work of the work when the work when the work was the work when the work

Michael Richter that 'Advanced BASIC Programming is not a adiction in terms' (p. 1). robably large numbers of Commodore enthusiasts who work in Basic find themselves looking for ways of improving or speeding up their programs. And they know that

very often these ways do exist. It is for such that Mr. Dichtor writes. Unfortunately, though, although he has much to say about the hardware itself, there is little that tells us how to use it. Apart from some useful tips in chapter 3. Mechanics of a Program, there is little to help us with our own

programming. There are program listings. Some of these are long; all are written in lower case and with some unfamili instructions for control keys. (c-d) is obviously 'Cursor down', but what do we make of: 9020 print"(clr) (grph) (home) (home) (tset) (c-d) . (c-d) "spc(39)" (bset) (wht)":

There is, apparently, a disk available to supplement the book, originally intended, it seems, to be supplied at the same time, but the word 'enclosed' is struck out in ball pen! Instead, we are asked to send \$24.95 + sales tax to the publisher, or it can be charged to Visa or MasterCard. This might well help to achieve the object of the book, but makes it an expensive package.

- Advanced Basic Programming for the Commodore 64 and other Commodore Computers

Robert J. Brady Co. (A Prentice Hall Publishing and Communications Company) £8.95 Difficult to find the wood for the

he front cover invites us to 'Find out what goes on insi the Commodore 64!" The back promises that 'By the time you've finished this book, you'll be fully prepared to study such advanced topics as machine language programming and arcade

graphics. You'll not only understand low a computer works, but you will have learned powerful techniques that you can use in your own programs.

Snooping is a technique for looking into the various memory locations of the computer. This is done through some 40 short programs which the reader keys in and, it is suggested, saves. These are easy to follow and each has a detailed explanation. Inevitably, some of the explanations are complicated; computers are

There is a lot of precise detail. For anyone who feels the need to understand what happens between the keyboard and monitor screen, this is a nainless, and cometin amusing, way of finding out

For me, the promise on the back

cover was largely unfulfilled. There is little about machine language and less on graphics. The book falls halfway - not enough for some, too

much for others £14.50 for 205 pages is not cheap. Anyone content to write in simple Basic will find much of the detail unnecessary. To get into the realms of machine code and arcade graphics requires very much more information than Dr. Malitz's snoops

will uncover. George Pike - The Super Snooper Book. Find out

what goes on inside the Commodore 64 Dr. Isaac Mailtz

£14.50 - Falls halfway

ose to the heart of anyone in computer marketing is a dream of millions of happy people doing Useful Things with their computers. Managing is certainly one such thing. Although computers like the Commodore Plus/4 include various data

manipulating programs, older computers like the Commodore 64 need additional software to perform these functions.

There's no shortage of co rograms to turn the dream of efficient data management into a reality on the 64, but writing your own programs is a different matter. The truth is that writing useful and reliable record-managing programs is hard; it's possible to know a great deal about Basic without having nuch idea about how to go about this task. The file-manipulating commands are sometimes awkward, but the real problem is figuring out how to structure the program once you've mastered the commands themselves.

possible for 'anyone' (to quote the Introduction) to write and use customised record-managing programs. I feel this to be a bit earnest attempt to satisfy a wide

range of skill levels. The book starts very gently, with definitions of files and related terms.

some discussion about how Commodore implements files and some simple examples of creating and using files on cassette or disk. More than 30 pages are devoted just to these few topics, and commands are firmly integrated into their programming contexts. You won't find this kind of detail in books covering a more general range of

Next, the book plunges right into programming a mailing list filing system. The author has made a certain set of choices in setting up this and other programs. For example, he prefers separate programs, each under the control of a master program, for each filing function, rather than one main program with separate subroutines for each function, Experienced programmers will be interested to compare the various examples to their own approaches. And beginners will have the advantage of an approach that works. One objection I have to the programming technique is the use of the Basic INPUT command for keyboard input: this has too many limitations and pitfalls for the unwary user There are sections devoted to both

sequential and relative (random access) files. Sequential files can be implemented on either tane or disk but relative files require a 1541 or equivalent disk drive. I found that several lesser-known quirks about Commodore files are glossed over or not mentioned at all in the book. For example, there is an easy way around the 80-character limitatio on input record length. Also, in the section on relative files I didn't find generally can't write just part without getting into trouble.

In summary, this book fills a real Commodore 64. It seems to me that there are too many books about game programming and virtually none about more 'serious' topics like this. The book is well-written and thorough, even if not as easy to follow or master as the author would like you to believe. If you have some background in Basic, or are working to get it, this book is absolutely essential reading before you try writing your own record-managing programs. At a price of £8.95 (for more than 400 pages) it must be considered a real bargain.

· Copies of all the programs in the book, plus additional programs and documentation, may be purchased as a two-diskette set for \$27.50 from: C-64 FILES, AEN, 9525 Lucerne St., Ventura, CA 93004, USA.

NOW PROGRAMMING

> YOUR HOME COMPUTER

IS AS EASY

AS READING THIS. Let's face it, most 'beginner's guides' are anything but v reading.

Now Dorling Kindersley have come up with a new way of learning BASIC that's unique, simple and down-to-earth. It's called 'Screen Shot'

Unlike ordinary guides, Screen Shot uses full-colour photographs of real computer screens to show instructions,

program listings and displays.

So what you see on the screen in the book is precisely

what you'll see on your own computer screen.

Which makes our programs easy to understand, easy

Which makes our programs easy to understand, easy to read and free from misprints or other sources of confusion.

The accompanying explanations are clear, practical and are written by experts.

You'll find there are Screen Shots for most popular makes of home micro.

Books I and 2 of each series form a complete guide to BASIC programming for that computer.

For the more adventurous programmer, Books 3 and 4 explore the creative world of computer graphics.

In the words of a reviewer in Big K magazine, Screen Shots are "...clearly and expertly written with the best layout I have seen in a book of this sort... what you see is ifor once what you get. Outstandingly good and for beginners

or semi-beginners: highly recommended."

The message is clear. If you really want to get into programming, get a

MAKING THE GRADE

Longman 'O' Level revision programs reviewed by Colleen Young

Each subject covered in the range comes on tape and, rather annoyingly, only the latest French and Biology ograms feature a turbo loader. Each program is accompanied by a slightly cumbersome leaflet which contains instructions for using the programs and notes on 'revision techniques'. Nothing really new here, though. You're told how to organise your subjects and time, how to learn most effectively and how to keep your interest going. The leaflet includes an eight-week revision planning chart and a checklist of subjects to be covered

All tapes have a standard format in that there are five different programs for each subject covered. Although they're advertised as being suitable also for CSE candidates, I feel they'd be more useful for 'O' Level students.

The first program on each tape is called Text, it is simply a long list of references (something over 500) on the subject in question. You can, for instance, see a set of references on Geometry on the Mathematics tape or Heat on the Physics tape; the latter would produce a list of words associated with Heat: boiling, conduction, convection and so on. In this case, there were a total of nine words. But no actual definitions of the words are given.

The idea is to study the lists and look up any unfamiliar words. This is quite a good idea, but would, I suspect, have limited use, since you'll probably tire of it quickly. One problem is that not all the words will be familiar to a student in that they are not on his/her syllabus. (The same is true of course with revision books, though some do give advice on the different examining boards.)

The maths pack

So let's start with Mathematics, the programs (apart from Text mentioned above) are: Transform, Trig, Stats and Odds. Transform allows you to plot a figure by giving the x,y coordinates; you can then transform the figure by using enlargements (including one-way stretches), reflections, rotations and translations. Compound transformations are also allowed.

However, this program is rather spoilt by two factors: the scale is fixed and a bit of

Last month we looked at a wide range of educational software for tiny tots and budding juniors. But the Commodore 64 has also spawned a few programs for older children. exam revision software in particular. Longman Software now has a range of cassettebased programs covering Mathematics, Physics, Chemistry, Computer Studies and, just released, French and Biology. Colleen Young, herself a teacher, finds out whether these programs will put you top

excellent — the displays of the transformed figures are very good indeed.

of the form.

Next comes Trig, which as gives the program the opporits name implies tells you all tunity to include some games about triangles including to give you a breather. Unfor-

This is a great shame produce pie-charts and baras the program is otherwise charts; these are easy to protape is on probability, which

The last program on the Pythagoras. It allows you to tunately the explanations

given here are not very com prehensive: they start simply but suddenly introduce new ideas out of the blue! Also too much emphasis is put on a chance of 'l in 2' say, whereas children learn that a probability has a value between 0 and 1

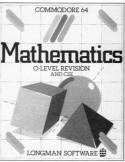

Getting physical

On to Physics; the programs here are Formulae, Circuits, Light and Machine, Formulae gives you the opportunity to choose a topic, it will then give the relevant formulae together with rearrangements. You also have the option to enter your own data to find an unknown. The program contains a demonstration on solving equations which would have been quite nice but for a horrible error! It occurs in an equation for acceleration. Having given you the time-honoured advice which Maths and Science teachers must mutter in their sleep — 'you must do the same to both sides of the equation' - the program proceeds to multiply one side by T and at the same time divide the other side by T . . . things get worse, two Ts are then cancelled, both of which are in the denominator! This apart (though I find it hard to forget), it's a handy program if you are trying to learn a few

Circuits demonstrates Ohm's Law. The circuit diagrams are nice and it seems a useful program. For any electrical circuit given. you are told the values for current, voltage and resistance, then a second lamp is added and you are given the new readings. Then you're on to resistance; the program inwell from the tutorial section. One gripe is that text scrolls annovingly slowly across the

bottom of the screen. The next program, Light, includes lenses, mirrors and ray diagrams. Well illustrated explanations are given followed by tests. The final program. Machines, discusses levers and pulleys. After a promising display of a pulley system what follows is rather less exciting (various formulae with explanations) though quite useful. My favourite part of this program was trying to throw a stone at a castle using the stonethrowing engine - a great incentive to learn about the

The right Chemistry?

The Chemistry tape contains the programs Elements, Mole, H2S and Reactivity. Elements gives data on the most significant elements in the Periodic Table. The information may be retrieved in various ways, giving a good demonstration of the way a computer stores and manipulates data, as well as useful information. The student can compare aspects of various elements using the

program. Mole tackles the calcula tion of the mass of one mole of any given compound. Tests are provided as well as the explanations; quite a useful program. Then it's on to H2S. which is a game - great fun! You are given a task to perform, for example, to make up some compound. You also get a list of things you need. Collecting this equipment involves running round a lab opening cupboards, if the fume cupboard is opened you need to make a mad dash for the door to save yourself

The final section. Reactivity, is a tutorial and test on the relative reactivity of a series of metal and non-metal ions. Ion exchange in solutions is also covered, as well as double decomposition. It is possible to enter your own compounds to see how they behave in solution - a well presented program.

Use your computer

On to the Computer Studies tape, which contains the programs Visicode, Putin, Files and Logic. Out of that lot. Visicode and Logic are the best by far. Visicode would be useful for teaching as well as revision; it demonstrates low-level languages very well indeed. An example program the accumulator and registers shown as the program runs.

Logic shows how logic cirtests where the student has to give the output of a gate given the input. Putin, though, drove me mad: this is a colsupposed to correct. A always highlighted in red. reasonable idea I suppose but was worth it when I ran the it's all getting more difficult. kidneys. By answering a more pulatable.

MAKING THE corrected versions. It would be easier to write your own routines in the first nlace. Sundardanding and should denisted schedule denisted schedule.

Files covers what must be one of the most important aspects of the syllabus. demonstrating various file handling routines. It also lets you create files of your own. Perhaps I have been spoilt (we have Superbase at school) but this was a bit of a let down and does not really illustrate the topic well.

Test your French

The French revision tape opens with two programs, Lexis 1 and 2, which attempt to consolidate your knowledge of French vocabulary. Like the rest of the package, these programs are menudriven, allowing you to choose from a range of fourteen themes. When you've done that, you can display all the words and test vourself either in French or English. The third option lets you type in a word and then receive its translation. That

may sound useful but, unfortunately, it's very slow and no substitute for grabbing your dictionary. Lexis 2 works in the same way but extends vocabulary to around 2,000 words.

basic) of what's happened. earlier stages, special kevs give you accents, circumflexes and cedillas. But

not told it's shifted.

screen has shown only text. This program has both French national anthem). least worthwhile. From a list of regions, towns, wines and cheeses, you can find out in which part of France they're located. Generally, the program does provide a novel and alternative way of overcoming the tedium involved in learning and testing your French vocabulary.

Getting Biology taped The Biology program starts by

giving you a flowchart of how RESPIRATION KELETO A BORING HAY OF GETTING

ALL HORDS NOW USED. SCORE 118

The next program. Verbs. lists seven regular verbs. is given and the contents of three regular reflective verbs and 38 irregular verbs. The object here is to allow you to revise the various tenses and cuits operate and includes forms. You choose various options from the menu: as well as the present, imperfect, future, perfect, past historic and present subjunctive, you lection of routines containing get the conditional and the deliberate programming various participles. Correcmistakes which the student is tions to wrong answers are Moving on to the Compre-

four main areas: plants, animals, general, theory/experiment. You're given a list of words and concepts in each area, with stars placed by the most important. For example. if you choose 'evolution' your most important concepts, according to the program, would be adaption, competition and natural selection.

The second program is an entertaining 'hangman' game. Again, you choose from a list of options in-I wasn't sure that all the effort hension program, you'll find cluding blood, bones, ears,

short 'stories', reading, put a bone on the graphically understanding and almost depicted skeleton. The rules memorising them because aren't explained, though; you you must rewrite the story, bit by bit, being prompted by bit, being prompted by lit- 'scientific method'. There's a tle graphic displays (rather nice touch here: when you've chosen your option, a The stories are pretty un-skeleton head moves across inspired, though. Like the the screen and munches the words.

Next to load is Heredity which looks at dominance there's some carelessness blending, sex-linked here - one accent uses the characteristics and punnet shifted 'slash' key, but you're squares. Graphic guinea pigs abound here. You're Onward to the last program presented with a mating and for a little fun. So far the asked to predict the proportion of the F1 generation which would have each possigraphics (a lo-res map of ble phenotype. The punnet France) and sound (the squares show the expected results of fertilisation, taking Despite that, this section is the green and vellow peas as the example. Kingdoms is concerned

with the animal and plant world, allowing you to build up the characteristics of a particular specimen by choosing from lists dealing with structure, nutrition, reproduction and size/visibility. So if you chose a single-celled structure that was parasitic, reproduced by division and was microscopic in size, you'd get the answer 'bacteria'. If the computer can't find a direct correlation.

it will give the closest. Finally, there's Food, a program that lets you calculate a person's daily energy needs by specifying weight and daily activity. There's also a game to test your knowledge of the water. protein, fat and carbohydrate content of various foodstuffs. That's complemented by a list of their calorific values.

It will become apparent that the programs vary both in quality of material and presentation. But at the reasonable price of £7.95. there is certainly something on each tape to make it worthwhile.

It could be argued that most or all of the information presented in the courses could be found in revision text books. But that would deny the sheer novelty value that a computer must have over text books for children. Probably no child relishes revising for exams. These programs will make their less favourite subjects

Write away

This is your page: normally we write for you, but here we listen. Feel free to let us know what you think - about the magazine, about Commodore, about suppliers, about life, art, the meaning of existence or whatever. We don't print everything we receive, of course; but anything that might be of specific relevance or general interest will make it to these pages.

Good words for the 1520

In the December issue of Con modore User, one of your reade queries was, "Which word pro cessor gave support to the 152s You replied that you didn't know of any word pro cessor that gave support to the

word processor and printing it out on my 1520 plotter.

was supplied to me from A&C Software, 51 Ashtree Road, Tividale, Warley, West Midlands B69 2HD, tel: (021) 544 7135.

The program is fully menu driven, and at the completion of every option you are returned to the menu for further processing. The main menu options available are as follows:

- write text
- · edit text print text
- save file · read old file
- exit/clear memory memory check
- disk directory It will also give you tab indent as well as right justification and text can automatically be centred. The wordprocessor is called 'TEXTFILE' and in my opinis

£8.25 that I paid for it in

H. Pepper. 35 Amethyst Road. Bilton Grange. Hull HU9 4JE North Humberside.

The layout of your letter was certainly impressive — but it looks as though the program can't manage the 'f' sign

1520 again . . .

With reference to the article or the '1520 Printer Plotter', which appeared in the December issue of Commodore User I would not amodore User, I would suggest that you are being robbed if you pay out £5 for a set of four pens. I can get the same pens in Newcastle for £3.95. Again if you go to your nearest 'Tandy' shop they are called 'Radio Shack' in my area - the same pens are available at \$1.99 for a set of three; either three black pens, or three coloured pens. Their paper rolls are also the same as Commodore's, and cheaper. Mr Chris Durham is to be con gratulated on his very clever pro

gram 'Biorhythms'. Please let us have more of them T.H. Brown, 92 West Farm S20.
This letter was written using a Newcostle on Tyne NEI2 SBU.

> And again . . . In the December issue of Com modore User Tommy stated that there wasn't a word processor which supported the 1520 Printer Plotter. In actual fact "Easyscript will support the 1520 without any modification. Simply proceed as

follows: before loading "Easy-script" enter the following (in OPEN6.6.6: PRINT #6.1-

This sets the plotter to norma wer case/shifter upper case Then load "Easyscript". After typing your letter etc. press (f1) then O (output) D (device) 5 (rtn) for the plotter P (to print out). P.S. You may have guessed that

this letter was printed using the 1520 and "Easyscript"! Steven Birks, 86 Birches Head Road, Birches Head, Stoke-on-Trent, Staffordshire STI 6LJ.

Upgrade blues

With the demise of the Vic 20 there may be a number of your readers who are considering the 64 as a replacement. Let me ea

from the supplier I was assured they were all compatible with the 64. The supplier gave me a weird 'Open' command to use with the Disc Drive which was confirmed by CBM Corby. Needless to say it did not work. Further enquiry to CBM gave me a couple of 'Pokes'. This appeared to work until I attempted loading a database pro-gram. Yet another enquiry gave

me the information that the Pokes' would not work if there were any 'Loads'Saves' in the program and the only way to ensure

I loaded the 64 magazine tape from the Datasette and got a 60% 'Load Error' response. A friend loaned me his C2N and everything was perfect. This means I've spent £22.42 for a chip and £39.95 for a C2N. So, when a supplier tells you that the peripherals are 64 compatible - they're not

C.K.R. Harris, 53 Martin Fareham, Hants PO14 2RZ

Obviously your supplier didn't know better or was leading you up the garden path. You're right, the 1540 suffers timing problems when linked to the 64. Commodore will sell you the upgrade chip for £19.95 but charges £35 to fit it for you. By the way, the 1530 Datasette and the C2N are identical inside. Both are compatible

Chart flopper After reading the December iss

of the magazine I was dis appointed to see that the chartdid not include one Vic 20 pro gram, I noticed that the Com modore 64 had its own charts and was included in the top thirty. Couldn't the Vic 20 have its own top 20? I enjoyed the screen scene very

much this week, with a picture of the game on screen it makes it easier to choose a good game. I am glad to see that

tion was magazine now includes a Vic 20 the Vic 20, 1515 Printer, Datasette adventuring spot, I am a keen adventurer so you can see it was good news to me. I enjoy your magazine very much so keep up the good work

and I'll keep buying it Vaughan Morton, 25 Beaumont Lawns. Marlbrook Lane. Bromsgrove, Worcs B60 1HZ.

The very reason that Vic games hardly ever appear in the charts means we can no longer justify a Vic chart. I'm afraid the Vic Adventure Round-Up is not a regular column. Sorry

Easy repeat

With regard to one of the Victuals you published in the December issue: 'Key Repeat' by William Fong. Try POKE650.255 and hold down any key. Slightly shorter? Nick Weatherhead, 58 Kingsbury, Aylesbury, Bucks.

High score

I was very glad to see the joint offer made by you and Me ouse. I am an avid Shoot 'em up and Olympic maniac and have never ever attempted an

I reed most magazines with envy when I hear of people who have completed this adventure and that adventure, so I decided why not try one? And for a game that looks a great prospect, but only cost 95p, how can you go

David Brown. 8 Albion Road. Walthamstow. London E17.

Send your letters to: Write Away. Commodore User, 30/32 Farringdon

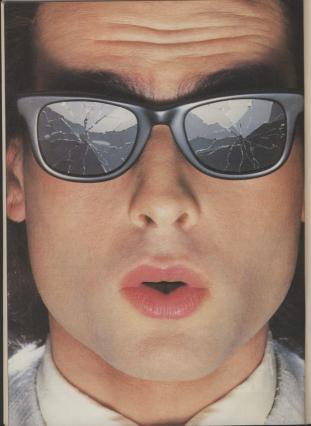

London EC1 3AU.

Who's been telling lies then?

How to build a lie detector/heart rate monitor. All will be revealed in February's issue of ELECTRONICS & COMPLITING

At your Newsagent on Jan 13th.

You should see what he's just seen.

Micronet 800.

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, informations and software system. Set on our mainframes nationwide.

Includes 30,000 pages and access to Prestel" with its full range of services. A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages

and graphics at a touch of a button.

And there's the Chatline service,
Swapshop and Teleshopping.

Check with daily updates on the very latest computer news.

Micronet also has its own buse

Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free. For only £13 a quarter and just a local telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

rt of Micronet.
The only accessory you need is a

Modem.

A small price to pay to join the other visionaries on this exciting new

microne

system.

Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the

amazing things it can do.

To MCRONET 800, Darnes House, 8 Hebal Hill.

TOMMY'S T

Tommy is Commodore User's resident know-all. Each month he burrows through a mountain of readers' mail and emerges with a handful of choice queries. The result, before you, is a wadge of priceless information and indispensable advice. There's even the odd useful tip as well

Dear Tommy. I have just bought a 1520 printer/plotter and the Vic Type word processing package but it will not work with the 1520. I've tried changing the program but it's in machine-code - big roblem. Can I change the 1520's device number or do I need to buy another program.

Another problem is the subcommands involved in drawing with the plotter. Please could you explain

Regarding changing the device number of the 1520, it was covered in the review in the December issue. It involves ad- 100 GOTO 30 ding a wire to the PCB so you will need a soldering iron (or a friend who can solder)

If you want a slightly better program to enable you to print directly on the plotter then try the ed as follows: following little program. It allows H - plotting equivalent of you to correct a line on the screen before sending it to the printer and you do not have to press Return at the end of each line I -(unless you want a new paragraph) although some long words may get wrapped round. To end the program, type '@'. (For those who would like to try this on an 80-column printer, alter the '40' in lines 60 and 90 to '80' and alter '35' in line 90 to '75'. You will also have to change line 10 to device 4 only and delete line 15):

10 OPEN4.6: OPEN6. 6. 6 15 PRINT #6. 1 20 PRINT"[CLR]": PS=""

30 GET AS: IF AS=" THEN 30 40 IF AS="@" THEN PRINT: PRINT #4 PS- CLOSE4-CLOSES: END

50 IF A\$=CHR\$(20) THEN PRINT"[CUL] [CUL]":: T=T-1: PS=LEFTS (PS. LEN (P\$)-1): GOTO 30 60 IF AS=CHRS(13) AND T < 40

THEN PRINT 65 IF AS=CHRS(13) THEN PRINT #4. PS: PS=": T=0: GOTO 20 70 CH=ASC(AS): IF CH < 32 OR

(CH > 93 AND CH < 193) OR CH > 218 THEN 30 80 PRINTAS:: PS=PS+AS:

90 IF (T > 35 AND AS="") OR T=40 THEN AS=CHR\$(13): GOTO 60

As for the 'sub-commands' these move the pen relative to either a fixed start point or

another point which you can specify. They can best be explain-

HOME, moves the pen to the start point without drawing (Pen up) sets a new point of origin where the pen is (called the

relative origin) M -moves the pen to position X,Y with respect to the start point (Pen up)

D - as 'M' but with the pen R - as 'M' but the X.Y are with. respect to the relative origin instead of the start

point (Pen up) I - as 'B' but with the nen

If the relative origin is set at (SO.0) then PRINT #1, "M": 50: 150 will move the pen to (50,150) with respect to the start point whereas PRINT #1, "R"; 50; 150 will move it to (50,150) with respect to the relative origin which is the same as (100,150)

with respect to the start point I hope that's not too confusing: the best way to learn is to try it out with a few simple programs. Dear Tommy, I have tried everywhere to find out what

the screen locations of the block graphics and colour for the 16K expanded Vic are. Please could you tell me? Also, could you tell me if

picture on to tape from the visual display unit, and recalling it from tape? By the way, could you also tell me if there is any method of disabling the Run/Stop kev?

The screen and colour maps for the expanded Vic are at 4096-4607

for storing information from the screen, the following code will do it in Basic: 1000 OPEN2, 1, 2, "SCREEN DATA"

1010 FOR A=0 TO 511 1020 PRINT #2, PEEK (4096+A) 1030 PRINT #2. PEEK (37888+A) 1040 NEXT A

1050 CLOSE 2 To read the screen back in, use the following:

2000 OPEN2, 1, 0, "SCREEN DATA" 2010 FOR A=0 TO 511 2020 INPUT # 2. SC: POKE 4096 TE SC

2030 INPUT # 2. CL: POKE 37888 +A. CL 2040 NEXT A 2050 CLOSE 2

These routines will not be particularly fast, since you would 20 PRINT "<CLR> <CUD4> need to go into machine code for speed, but they will enable you to preserve a screen and recall it. 30 LOAD"P2 < DEL > < DEL > ".8 Note that to use them you must en- 40 END put text on to the screen.

THEN GOSUB 1000 somewhere in no name and so cannot be loaded the main loop. Pressing f1 will directly from the disk. Check the now cause the routine to store the program very carefully and then

screen. You must ensure that the tape recorder is already set up to record and press the play/record buttons before pressing f1, otherwise you will get the warning message on the screen which will be saved along with your masterpiece.

Lastly, POKE 808, 251 will disable the RUN/STOP key simple as that.

Dear Tommy, I am doing some development work with my Commodore 64 and 1541 disk drive for the manufacture of steel costings.

The contents of the program I do not want to be available by listing on the printer or screen. Once the program is Run the 'Run/Stop' key has been disabled and I have

made it cold start upon an However, straight after

loading, the program can still be listed; it needs to load and and 37888-38399 respectively. As run in one operation, Is this possible for me to do?

> This query gives me the chance to try out a short auto-run program that I have had in the back of my mind for ages. If you're sure noone is looking over your shoulder I'll show you how to do it. Write your main program as normal and debug it. When it is running perfectly, store it on the disk as 'P2 < DEL > < DEL > ". With P2 paded into the machine type the following in direct mode: PRINT PEEK (46): PEEK (45) and write down the two values that appear on the screen Now type NEW and then the

> > 10 POKE 46. X:POKE 45. Y:CLR (replace X and Y with the

values you wrote down) CURS> PROGRAM LOADING - PLEASE WAIT"

sure (for the 'save' at least) that (The < DEL > < DEL > are added the action of calling them does not by closing the quotes, then pressing 'SHIFT INST' twice, followed Therefore incorporate a line by the delete key twice. This en-GET FS: IF FS=CHRS (133) sures that the main program has

type the following in direct model use in a small but exactly as shown (replacing <CLR> by 'SHIFT CLR/HOME'

of course) POKE44, 0: POKE43, 198 - DETIIDM -POKE198, 0: POKE831, 82:

POKE832. 85: POKE833. 78: POKE834, 13; POKE198, 4; ?" < CLR > ": SAVE "P1", 8 / RETURN >

Ignore the Syntax Error you will get and turn off the machine immediately after saving the program as the start of Basic has been altered (note that if you make a mistake in any of the direct commands you will have to start again from scratch). To run the loader program, type LOAD "P1", 8, 1

This will alter the start of fer. By POKEing 'RUN' into this buffer we have ensured that it will be actioned as soon as the program is loaded, making the first program auto-run. This then sets the memory to the correct size and auto-runs the second program. Note that this method will NOT work with the cassette as the cassette buffer gets overwritten when you try to load the first program.

Dear Tommy, I have seen a number of ads for a 64K Ram cord for the Vic 20. The reference guide says the maximum expansion is 32K. Can the Vic be enhanced to

64K or are there drawbacks? If a 40/80 column card was also added, would this make the Vic 20 a viable wordprocessing/business comp comparable to the 64 (assuming the addition of other peripherals and software being available)?

The Vic cannot be expanded to before loading the program; there Ine vic curinor me expanses of the state of memory locations in the form of POKES144.0 'pages' of memory that can be To move and relocate the swopped in and out. They have character set use the following

program in memory and switch 20 POKE 5120+A. between them at will, thus saving PEEK(32768+A) valuable time loading from tape. 30 NEXT A However, you still have to load 40 POKE 36869, PEEK(36869)

the programs in initially unless OR13 the RAM also has some form of Note that the character set must battery back-up. What these RAM begin on a 1Kbyte boundary. 20 into a Commodore 64.

accounts and spreadsheets, for the start of Basic even higher.

don't want to upgrade to a bigger computer. While they will not give the memory of a 64, thus limiting the amount of data that can be stored at one time, this just means that disks are a must for serious use

Software is available for such boards, but usually only from one company since each board works slightly differently and the software is usually written specifically for it. You will also require a monitor, since none of these boards will work with a standard

These are just two of many queries relating to User Defined Graphics on the expanded Vic. One of the memory to include the input buf- problems with redefining the character set on the Vic is that it can only be done within the original SK RAM that is permanently in the machine. With the unexpanded or 3K Vic there is no problem since you can position the new character set under the screen memory and move the top of Basic down.

Unfortunately when the Vic goes over 8K RAM then the screen moves down below Resid leaving no room for the character set. The only solution is to move the bottom of memory up and fit the new character set between the screen and start of Basic, Because you are now moving the start of Basic it is not possible to do it from within a Basic program

What you need to do is write the program from the new start position, having altered it in direct mode, then save the program and ed it using the command LOAD"filename".1.1. However, unless vou use a m/c loader program which alters the start of Basic pointers you will still have to do it by typing the commands

code. What these 64K RAM packs POKE44,24: POKE43.1: do is to give you alternative POKES42.24: POKES41.0: CLR:

their uses, since some of them will code in your program: allow you to store more than one 10 FOR A=0 TO 1023

packs will not do is to turn a Vic Since the screen starts at 4096. the next boundary is 5120. The With regards to a 40/80 column minimum character set requires board, these can be extremely 1024 bytes, hence Basic has been useful if you want to use a Vic for moved to 6144: if you want more regular wordprocessing or stock than 64 characters you can move

For the latest information on every QL hardware and software release, turn to QL USER, Every month we review the latest games, educational and business

packages, together with program listings, book reviews and your readers' letters. Plus, of course, hints and tips on how to get the most from your QL. If you're a QL user, choose the magazine written exclusively for your machine - QL USER. Available from all good newsagents.

FINICATIONAL

DON'T VAT THE PRESS

There are strong reasons to believe the Chancellor of the Exchequer is planning to impose VAT on your magazine. Such a move would turn the clock back 130 years - the last tax on newspapers and

ournals was repealed in 1855. Since then 'No tax on knowledge' has been a principle agreed by all Governments, even in the darkest days of war. A free Press is a tax-free Press.

No Government should be given the power to impose financial pressure on a Press it may not like. Tell your MP to say 'NO' to any tax on reading.

Issued by the Periodical Publishers Association, London

Learning To Cope is an annual publication compiled by journalists on Educational Computing with five years' experience in the field of education and high technology. The third issue of Learning To Cope deals with all aspects of computers in special education. This issue gives

information on the latest developments in hardware and special aids designed and adapted for physically and mentally handicapped children

and adults. The progress made with microelectronic devices helps create independence for all who use them

A large proportion of Learning To Cope is dedicated to software, with a catalogue listing all the specially designed programs for children and adults with specific needs. It also includes a comprehensive software reviews section which examines how programs can be used as teaching and learning aids across a wide range of subjects. Computer applications are illustrated through case studies covering such topics as computers and the blind and how computers can help to stimulate mentally handicapped children.

Learning To Cope is the only publication which deals in depth with computers in special education. It offers practical advice and guidance as well as pages of useful information and contacts. It is something you cannot

afford to miss if you are at all connected with the teaching of children and adults with special educational needs. -------------

Please send me a copy of Learning To Cope Computers in Special Education. I enclose a cheque/postal order made payable to Educational Computing for £2 (including P & P). Discounts are available on bulk orders - contact the editorial office on 01-251 6222 ext. 2475.
