How to submit articles

The quality of the material we can publish in
Dragon User each month will, to a very great
extent, depend on the quality of the
material that you can make with your
Dragon. The Dragon computer was launched
on to the market with a powerful version of
Basic, but with very poor documentation.

Articles which are submitted to Dragon
User for publication should not be more than
3000 words long. All submissions should be
typed. Please leave wide margins and do
double space between words. Programs
should, wherever possible, be computer
printed on plain white paper and be accom-
panied by a tape of the program.

We cannot guarantee to return every
submitted article in program, so please keep a
copy. If you want to have your program
returned you must include a stamped,
addressed envelope.

Software Reviews

New games and utilities for the Dragon
reviewed by our panel of experts

21 Editorial

Editorial

HOW ARE THE mighty fallen! Acorn, once the darling of the United
Securities Market, has been forced to restructure itself with financial aid
from Italian giant Olivetti. Commodore UK has halved the price of its new
Plus/1 micro and parted company with its general manager Howard
Stanworth. Even Sinclair has cut back on production and postponed the
US launch of the QL.

Nor is this phenomenon confined to the UK. Sand, once described as
the "Japanese Apple", has been in discussions with Toshiba about
possible investment. This follows a sharp drop in profits last year and a
reduction in market share to little more than four per cent.

The micro market can fairly be described as "frittery" at the moment. The
boom years of 1980-83 are over and no one is quite sure how big the
market will be in future. This, in turn, has had a knock-on effect among
book and software publishers.

Dragon users, of course, are quite familiar with this situation having
experienced the troubles associated with Dragon Data's demise. Thus,
they are well placed to advise their fellow micro owners that it is not
"doom and gloom". Any machine which establishes a large user base will
continue to be served by software and peripherals for some time, even if
the manufacturer ceases to exist.

Hopefully, once excess production capacity has been shed, the market
will settle down again. The question occupying most peoples' minds at
the moment is just how much capacity is excess — no one is taking any
bets on the answer.

Letters

This is the chance to air your views — send your tips, compliments and complaints to Letters
Page, *Dragon* User, 12-13 Little Newport Street, London WC2N 1PP.

Son et lumiere

I AM writing with reference to the Sound-to-Light program by Robert Shrage published in *Dragon* User in January. This program can be improved by altering the following lines:

```
100 C=1:60
110 C=C+1:60:GOTO 170
120 IF C=0 THEN T=T+1
130 IF T=1 THEN D=1:GOTO 140
140 IF T=2 THEN D=2:GOTO 140
150 IF T=3 THEN D=3:GOTO 140
160 IF T=4 THEN D=4:GOTO 140
```

The program will now respond much faster to the changes in pitch in the music.

Avoid the SAM sting

I RECENTLY had the misfortune to blow the 6803 SAM chip in my Dragon. The symptoms on cold start are a screen full of characters which are unaffected by inserting a cartridge, resetting or using the keyboard.

Attempts to buy this semi-conductor from my local dealers proved fruitless. All the dealers in an electronics magazine also failed to stock this item. Eventually, I found two electronic stockists who carried the chip. The sting was the price of £23.62.

An advertisement in an American magazine showed that I could obtain one cheaper in Silicone Valley. A Visa order placed on an After Eight phone call to DORAY Computer Products in Santa Clara, Los Angeles and five days later the chip was delivered to my home for a total cost of £19 plus postage. Quite a saving!

Readers' poll plea

I WONDER on what basis your software Top 10 is calculated? Is it the best games for the Dragon (mainly Tim Leavin's *Chaser* by Puddick, *Back Track* by Incentive and *Return of the King* by Wintersoft) have never even ap-

peared in this chart, which I should imagine is based on shoe sales? Well, you're getting a new *Dragon* game in any shop?

Surely, a better way would be to run a readers poll, as is *Popular Computing Weekly*. Then I'm sure these great games would attain their rightful position at the top of the *Dragon* charts.

W Miles
27 Clarence Road
Fleet

Hampshire RG9 7AQ

TOP 10 charts and their accuracy, or lack of, have long been a subject of debate. But, it is true that many shops have shown a marked reluctance to stock new *Dragon* software following *Dragon* Data's demise. It would be very interesting to know what other readers think about the idea of a readers' poll.

Sheffield shuffle

I THOUGHT I ought to write to correct a notice given in a recent issue of *Dragon* User. It concerns the Sheffield *Dragon* User group. Your last *Dragon* *Clubnet* showed us as the OS9 User group of Huddersfield.

I have had a number of calls concerning OS9 (which have been welcomed, since I actually use OS9 myself), but the club does not specialise in OS9. One of the calls was of interest, however, since the gentleman concerned was willing to answer further enquiries regarding OS9. His details are as follows:

Alan Kendrick
5 Henry Avenue
Haverhill, Nr Wakefield

I would be grateful if you could update our club details — we note mail only at Sheffield City Polytechnic (during term time) on the last Monday of each month. Incidentally, you may be interested to know that I have had enquiries from places such as Iceland and Germany! Your magazine certainly gets about.

Richard Coompton
Sheffield *Dragon* 8
CoCo Users Group
131 Hemmingthorpe Valley Rd
Rotherham

APLOGUES TO the Sheffield *Dragon* User group for pleasing you in Huddersfield.

Americans Dragons

THIS IS a plea from an unknown number of *Dragon* owners in the USA. We have been left with no peripheral or software support after the Tanso Corporation unsuccessfully tried to crack the over-protected American market.

Any articles aimed at US readers would be most appreciated. In particular, we need information on foreign mail order problems and on the possibility of interfacing Color Computer disk drives and controllers. Any personal information and advice from your readers would be welcomed.

Rocky Darkey
220 Eiva
Anderson

Dragon miners

COULD YOU please tell me where I can get a copy of *Mines* (later for the *Dragon*)? I have searched everywhere, but failed to find it. Hope to hear from you soon.

Conor Mynbery

IF YOU can't find a copy in your local shops, you can always buy the game mail order from Software Projects, PO Box 12, Liverpool L26 7AP.

Key friend

I WOULD like to congratulate you on your excellent magazine *Dragon* User. It is a great relief to see a magazine devoted solely to the *Dragon* even though the company went bust. I buy a copy every month.

I am writing to ask you to publish my name and address as I would like a computer pen friend.

Clonery

Flex

RE GO FLEX by Brian Cadge — *Dragon* User February — This article was unfair in that Brian expressed a personal preference for OS9 which some readers have taken as an unqualified recommendation. His factual comparison of OS9 and FLEX facilities were made to justify this opinion. Some of our customers, who have bought and used both systems, were outraged at such a shallow review. I note that a recent review by Radio West came down heavily in favour of FLEX and DBASIC.

I feel that you owe *Dragon* users a more detailed comparison of the two operating systems. Both have their virtues and are well worth examining in detail. It is a tribute to the power and versatility of the 6800 processor that two such excellent operating systems are available.

6809 Show

THE SECOND 6809 Colour show for Dragon and Tandy users will be held at London's Royal Horticultural Halls on March 30 and 31. Exhibitors will include Tandy, Microdeal, Compuserve, Design Design, Blady and Vintmagic.

A new modem for the Dragon will be launched by Dealer Deals. The Derman modem can handle baud rates from 300 to 1200 and will cost around £20. The price of the accompanying software has not yet been fixed.

Dragon User will be exhibit-

ing on stand No 45-48. There will be a wide selection of current and back issues of the magazine on display, together with a number of Dragon books from Sunstone, all for sale to the public.

Admission to the show, which will be open from 10 am to 6 pm, will cost £2 for adults and £1 for children under 12. Further information is available from the show organisers, Computer Marketplace (Exhibitions) Ltd, 20 Orange Street, London (Tel: 01-950 1612).

Last November's 6809 Show — busy as ever

Jet Set Dragon

IF YOU have ever tried to climb the Banquet Tree, get under the Security Guard or perform a Quickclimb, then the chances are that you have played Jet Set Willy on a Spectrum. Now, Software Projects is launching Jet Set Willy on the Dragon.

Jet Set Willy is the sequel to Miner Miner and again features the adventures of Miner Willy. The game is set in Willy's mansion and there are some 60 locations to explore, each with their own hazards and hidden surprises. Watch out for guards on the battlements and the entrance to Hades.

Matthew Smith's epic, which was converted to the Dragon by Roy Coates, costs £7.95 and is available from Software Projects, Altonic Road, Woolton, Liverpool L25 7DF.

Dragon roars

A SPEECH synthesiser for the Dragon is being retail by J Morrison (Micro).

The Speechless synthesiser plugs into the parallel port, and is powered from the mains. It has a built-in speaker, and will come with two software packages to demonstrate its capabilities.

The package will cost £24.95 from J Morrison (Micro), Dept DU085, 4 Ham Gardens, Tingley, West Yorkshire, WF3 1UR.

Compuserve imports Dragon 64s

EUROCARD has appointed London based Compuserve as its UK Dragon distributor. Compuserve is now shipping Dragon 64s and Dragon disk drives for sale in the UK. Single disk drives will cost around £260 and double disk drives about £360. The price of the Dragon 64 has been fixed at around £195. All

prices inclusive of delivery.

Both the Dragon 64 and the disk drives will be on sale at the Compuserve stand at the 6809 show on March 30 and 31 at London's Royal Horticultural Halls.

More information from Compuserve, Box 169, 298D Open Lanes, Palmers Green, London N13 5GA

New releases

BLADY Computer games will be showing four new releases at the 6809 Show.

Copter Smash, based on Scramble, Star Struck, a version of Galaxian, and Star Defence, a Defender type game, are all £1.99.

The fourth game, HiVert, is a version of Q-Bert, and will cost £2.99.

John Bailey, the company's managing director, says that a video display will be running full-time at the show to allow customers to take a look at the programs before buying.

A copy of the demo video has also been sent to Judo Alvarez of Sunstone.

Mysterious

THE Mysterious Adventure series originally released by Channel 5, will now be put out by Adventure's International, publishers of the Scott Adams' range of adventures.

This follows the announcement that Brian Howarth, author of the Mysterious Adventures, has joined AI to head the programming team.

He will be working on Dragon conversions of the entire AI range — Spideeman will be next, followed by a Gremmie game.

The Mysterious Adventure games are £7.95.

Mastertronic

MASTERTRONIC is converting its successful one armed bandit simulation, Vegas Jackpot for the Dragon. It will be in the budget range, at £1.99, and will appear towards the end of March.

Screaming Abdabs

LANCASHIRE BASED A&F Software has just released a new program for the Dragon — Screaming Abdabs. There are 35 complex screens, with various monsters, cities, satiating fiends and other hazards to prevent you from reaching your goal.

Each screen contains a key which is necessary to access the next level.

The game, which costs £8.95, is available from A&F Software, Unit 8, Caniside Industrial Estate, Woodside Street East, Northside, Lancashire OL16 1UR.

Incentive Confuzion

THE NEXT Dragon program from Incentive Software will be a version of the arcade game Confuzion, £8.95.

Ian Andrew, Incentive's managing director, says that Confuzion will be converted as soon as the programmer has finished the K&I Trilogy.

For more details contact Incentive Software, 54 London Street, Reading RG1 4BQ.

COLOSSAL CAVE ADVENTURE

The original classic adventure game for Dragon 64 with disk drive only £9.95

FLEX

For DRAGON or DELTA disk systems with Editor and Assembler £26.75
special price with DBASIC £26.99
a reliable and easy to use operating system. It is the ideal operating system for the DRAGON — especially when combined with your DBASIC package. Requires DRAGON with 64K RAM.
● 48K Bytes FREE USER RAM
● 51 by 24 1/2-Res Screen with true lowercase, autorepeat, redefinable character sets, windows, etc.
● Supports single and double density for interchange with other FLEX systems.
● Includes over 30 standard utilities.
● Powerful Macro Assembler
● Versatile Text Editor

DBASIC

£26.00

Own BASIC for FLEX. Get all the benefits of FLEX and run existing DRAGON programs with little or no changes.

- Standard 32K DRAGON BASIC
- 32 by 18 Screen and 51 by 24 Screen
- Send Commands to FLEX from BASIC
- Use up to 8 sequential or random access files simultaneously
- EFFORT GOTO statement to interrupt errors
- DRACON command shows you exactly where BASIC detected an error
- Load/Save programs as FLEX disk files
- Includes 5 example programs

DYNACALC

£26.95

Full feature spreadsheet written in machine code for speed/feature.

- Runs under DRAGON FLEX with 51 by 24 character screen
- 256 Rows by 256 Columns
- HELP Facility
- 16 Digit arithmetic
- Mathematical, Scientific, Trigonometric, Statistical, Logical and Business Functions built in
- Windows
- Plot Graphs
- Print all or part of spreadsheet
- Save/Load Spreadsheet on disk
- Delete Move Replicate Row/Column
- Execute FLEX commands
- Horizontal and Vertical Titles
- Sort

Data saved to loaded from disk by DYNACALC may be passed to created by other FLEX programs, eg RMS, BASIC, PASCAL, COBOL, text editor

CROSS

ASSEMBLERS

FOR ANY FLEX SYSTEM

5808D 5801D 5201 5805 5302 5080D 5200 macros, binary file calls — all the features of the FLEX 5000 assembler

EDIT +

EDIT+ is a Full Screen Editor and Programmer's Tool Kit. It's an excellent aid for writing programs in BASIC and is easy to use for the novice as well as the experienced programmer. EDIT+ includes all the facilities of HI-RES. Up to 23 lines of your program are displayed on the screen and can be changed by overtyping, inserting, or deleting characters. Functions include: Find String, Change String, Copy Text, Goto Specified Line, Scroll Up/Down, Append From Tape and Enter Basic Command. No Dragon is complete without an EDIT+.

Cartridge £24.50
Dragon DOS disk £24.00
Dragon FLEX Disk £19.95

RMS

£26.95

A complete DATABASE MANAGEMENT SYSTEM.

Versatile and very easy to learn to use. Ideal for accounting, business records, management information systems, customer records, customized data entry, stock control and much more. RMS can be readily configured to do many different jobs which require: data entry, online data retrieval/updates and printing of reports without any programming knowledge. An RMS database is stored as a standard FLEX random file and is accessible to user written programs.

Artist

Brian Hinson explains how to turn your keyboard into an artist's palette

ARTIST is a program for all the times you enjoy! You can just doodle away to your heart's content, or you can use the save and load features to create screens for games and illustrations, using all the bright colors from your Dragon.

The program starts by clearing all the Dragon's high resolution screens. It continues by asking questions to set up the Palette, Screen, Start page and Colors you want to use. The colors you choose for your background and pen must be from those available in the Palette you have set. (Refer to page 86 of the manual.) joystick or keyboard control is included. Keyboard control is easier to use for fine control but, joysticks are better for speed. Try experimenting for yourself.

You should now have a small flashing dot that you can move around the screen. Press 'C' for control, and the computer will "beep" whilst waiting for a command. Now press 'I' for ins, and the dot will leave a line of your pen colour. To change colour press 'C', followed by the code number for the colour you want, (eg. 4 = red in Palette 3).

If you want a line at a difficult angle, or to join two points you need to enter "box" mode. Position the dot at one end of the line and press 'C' — 'B'. Dragon will remember this point. When you are ready, position the dot at the other end of the line

required and press 'C' — 'B' — 'I', and your line will appear.

Box mode is also used to draw squares and rectangles. First register the starting point as before, then move to the diagonally opposite corner and press 'C' — 'B' — 'B'. They presto! a box. Make sure you have not left a hole at the corner and you can pan it. Move your dot inside and press 'C' — 'P' — followed by the number code for the point you want, (eg. 2 = Yellow). Box mode is also used to pick up some part of your picture. However big, and PUT it elsewhere. As before register the diagonal corners, 'C' — 'B', then 'C' — 'B' — 'G' and the box will be remembered in array 'T'. (see line 96).

Did you know that you only need 1/32nd of the memory reserve the Dragon manual says you need for GET and PUT routines on pages 120/1? You don't need to worry about this to use "artist", but for use elsewhere remember your array size need only be "x" length multiplied by "y" length divided by 32 and rounded up to a whole number. For example, the whole screen in Palette 3 is 235 x 191 = 44755, divide by 32 to get 1522.03. So you could Dimension an array F (1522) to pick up a whole screen's worth!

Having GET your detail, move the dot to the top left corner of the position you want to PUT it in and press 'C' — 'B' the detail

appears. If you need another copy of the same detail you only need to PUT it with another 'C' — 'G' and the array will continue to hold the same detail until the next time you use 'C' — 'B' — 'G'.

To draw a circle, or ring, press 'C' — 'R' followed by the radius you want. As the control routine uses keyboard input direct it have used the ASC II value of the key pressed, less 48, so you can have a circle of radius from 1 to 255, (ie. 1 to 7F).

Made a mistake? Use 'C' — 'E' to obtain an erase, and rub it out! Finished or want a new? Press 'C' — 'X' and you will enter the save routine. You will now be offered a choice of tape or print dumps. The tape dump is supplied in listing 1, but you will have to add your own printer dump as a substitute from line 1770 if you want this refinement.

To recall your picture for use in another program, include a line CLOADM "picture", and record the picture just after the program on the tape. Now your picture will auto load, probably much quicker than it could be drawn in Basic, and using less memory.

When you have become proficient at drawing you may wish to use the Perspective routine to create three dimensional pictures. First, decide on the vanishing point, position the dot and press "start". A target will appear and Dragon will remember its position even if you rub it out. From now on any time you want a line of perspective press "start". You will have to rub out the parts of the lines you don't want and things can get a little confusing, but the results are superb! If you are really advanced you can have two or more vanishing points by saving the part finished picture on tape — breaking the program, "run" and reload the picture and establish a new vanishing point. Have fun!

Battleships

Mark Beckham sets out to search and destroy.

THIS PROGRAM provides a computer simulation of the game "Battleships". In this version, you are pitted against the computer and must destroy its ships before it sinks your fleet.

The computer draws up a hi-res grid and

plots the positions of both its ships and your vessels. The computer then sets up a random search pattern for its shots while you can pick any spot on the grid and fire. A successful shot is greeted with a picture of the ship being blown up to the accom-

paniment of suitable sound effects.

Full instructions on playing the game are included in the program. Good luck.

Program notes

10-90	Get started and draw grid
100-260	Dimension arrays, see if instructions are needed and set positions of ships
260-460	Get player's shot, check for hit
460-660	Random hazards, computer's shot
670-700	Sound of missile and hit
700-1000	Graphics
1100-1400	Random hazards, plot grid, instructions

The Second

6809

COLOUR SHOW

FOR DRAGON AND TANDY USERS
SATURDAY 30TH AND SUNDAY 31ST MARCH
THE ROYAL HORTICULTURAL HALLS
10 A.M. UNTIL 6 P.M.

Everyone said the first show was good!

"Over 7,000 people attended ... queues formed early ... "Dragon User, Jan 85.
"The show was a tremendous success!"
Dragon Users Group.
"Many thanks for the very worthwhile 6809 show" Grosvenor Software.

This show will be even better!

Even more to see and choose from. The very latest hardware, software, interfaces and peripherals will be there together with all your old favourites. Your chance to get up to date, try and buy all that's new. And pick up some amazing bargains.

Over 60 companies and organisations will be exhibiting with special offers on their products.

We'll also be organising events and competitions with lots of prizes. The manufacturers will be staffing advice centres to help with all your queries.

Large gangways and spacious rest areas will make sure you can see everything and sit in comfort when you want. The second 6809 Colour Show is a family show, a good day out.

HOW TO GET THERE

The Royal Horticultural Halls are just off Victoria Street a few minutes walk from Victoria or Parliament Square.

Buses 11, 24, 29, 70, 76 and 88 run up Victoria Street.

Underground stations: St. James Park (District and Circle lines), Victoria (District, Circle and Victoria lines).

There is an NCP car park in Abingdon Street, a few minutes away.

This exhibition is organized by:
Computer Mark etplace (Exhibitions) Ltd.,
Part of the Southworth Sales Group,
30 Grogan Street,
LONDON WC2H 7ED

To: Computer Marketplace (Exhibitions) Ltd., 20 Grogan Street, London WC2H 7ED

Please rush me "Test drive" tickets for the Second 6809 Colour Show.

(City) Adult tickets at £2.00 (City) Under 10 year old tickets at £1.00

Please charge P.O. to the value of £..... or debit my Access/Diner/American Express card

No. _____ Signature _____

Name _____

Address _____

Postcode _____ Telephone _____

Dragon bulletins

WITH THE demise of Dragon Data, many Dragon computer owners feel very sad, don't wish many software companies abandoning the Dragon for more lucrative markets.

However, now you have a chance once again to put your humble Dragon to work and open up new horizons. On February 17 a new bulletin board went on-line. This bulletin board is operating in conjunction with REACT United Kingdom's (a volunteer communications organization) bulletin board. As well as providing information about REACT UK and what local teams are doing in the community, there is also a section for Dragon computer owners.

If you are the owner of a Dragon 64, all that you will require is a telephone modem with a 300/300 baud operating rate, and some software to drive it. Owners of the Dragon 32 will also require an RS 232 interface. However, this need not cost you a fortune.

I have been trying out the communications packages supplied by Cotswold Computers of 8 Middle Row, Clipping Horns, Osce, who can supply a complete communication package for the Dragon 32 for £185. Disk drive users can still use their drives as the RS 232 interface and DOS cartridge will work in tandem if you use a

mother board. Dragon 64 owners having an RS 232 interface built into their machines only require a modem and software which will cost about £115.

If the sounds like a lot of money to spend to access one Dragon bulletin board, bear in mind that once you have purchased your console unit you will be able to enter the fascinating world of Micro Communications. If you have never experienced the joy of your home computer talking to, and being answered by, your mainframe, I can assure you that it opens up a new world of exciting possibilities.

FREEB, the new bulletin board, caters for Dragon computer owners who have sadly been neglected by most of the other bulletin boards. There will be facilities to leave messages for other Dragon users, to swap ideas and problems on the Noticboard section, and even sell your unwanted bits and pieces. If the demand is there, it will also have facilities to upload and download free software. But, the most important thing about FREEB is it is for Dragon users to communicate with other Dragon users to help and further the use and understanding of the Dragon computer — and it's FREE.

FREEB will be on line 24 hours a day, except for Saturday mornings between 9

am and 12 noon when the system will be updated. The system runs on a Dragon 64 with specially written software and several disk drives.

To access FREEB first connect your modem and run the software — make sure the modem is set for 300/300 baud. Dial up FREEB on 0375 518695. After one or two rings the auto answer modem will transmit a tone, then switch your modem on-line and replace the telephone receiver. You should then receive the opening page which will tell you that you are connected to FREEB.

You will be asked to enter your name and password. Please enter your correct name as this will be used at a later date to let you know if there are any messages for you. As you will be a first time user, enter U to the prompt (PASSWORD). You will then be asked if your computer will accept lower case letters; answer Y if yes, if not answer N. You will then be presented with a menu of options that you may access. You will not be able to use the Noticboard until you register as a user — this is to prevent abuse of this section. Registration is FREE and facilities are available on the bulletin board for you to register.

We want you to have fun using the bulletin board, but please remember that any bulletin board is only as good as the people who use it, so your contributions and comments are very important. ■

Brian Lloyd

Forth Protocol

Mark Varney explains how Forth is used as a language

FORTH IS probably one of those least understood but most versatile and useful programming languages available today. Versions of FORTH seem to be available for almost every type of machine today — even including the new 32-bit processors. While end-users of the language (including both programmers and hardware design engineers alike) seem to endlessly exist in virtue, FORTH does not seem to have developed the following or popularity it deserves. This is unfortunate, especially to people like myself who seem to have been mistakenly labelled with the title of "software guru" because we dabble in a language which is neither primitive (machine code) nor high-level (eg. Basic), and use computer jargon that is not in common use.

FORTH is, admittedly, not an easy language to understand at first glance. The immediate impression a newcomer to FORTH would get is that the language consists only of "words" — there are no line numbers — and that numbers have to be entered in before the operators. A program would, therefore, consist of several words all on one line, or on several, separated by blanks and contained either in a "dictionary" or within "screenfiles" (both convenient areas of RAM which can be saved in the same way as a Basic program listing). The difference between them is that the dictionary will hold words which can be used immediately by typing them in at the keyboard. Screenfiles, on the other hand, contain words which have to be loaded into the dictionary before they can be used.

An extremely useful feature of FORTH is that "words", which carry out different routines designed by the programmer, can be called anything you wish. This flexibility can be a valuable asset in aiding the "documentation" of a program — for

example, the following sequence of four FORTH words:

```
DATA-VALUE  
TAB-DIGITS  
MULTIPLY-IN  
PRINT-VALUE
```

needs no explanation as to what happens in the DATA-VALUE. The use of English (in this case) means that programs can employ an application-specific vocabulary of words that will clearly be understood by the user.

Another useful feature is that this sequence of words can all be defined within yet another FORTH word so that only one word, eg. AREA, need be typed in, instead of all four, in order to "execute" the routine. The sequence of defining words within words can go on *ad infinitum*, and it is this procedure that gives writing programs in FORTH the name "bottom-up" or "structured programming".

The process of building up routines and defining words in this way, and then entering them into the dictionary is known as "compilation". All high level languages

have a dictionary of sorts — you'll find one if you PEEK around the Basic ROM (from 80A0H onwards) inside the Dragon, for example.

FORTH's dictionary begins in low memory, and expands up sequentially towards high memory, so, for example, AREA would be the last entry if no other words were defined afterwards. When it comes to "executing" the word AREA, FORTH will load an "instruction pointer" with the address of the last word in the dictionary and, if it corresponds to the word typed in, will start to run that routine. If the two words do not correspond then the last word in the dictionary will itself contain another pointer to the previous word because it is the dictionary (actually called a "link address"), if this does not fit then the next word is "linked" and tested, and so on until (in the case of a typing mistake) the whole dictionary would be searched from top to bottom.

Elementary routine

If the word definition is a very elementary routine — like adding two numbers together, or the LOOP instruction (similar in Basic's FOR...NEXT) — then the procedure used to carry it out is written immediately after the dictionary entry, and in machine code. The elementary words are termed "primitives", since you cannot do much else without them. Because the "primitives" are so useful they cannot usually be erased from the dictionary as can other words.

It is for these reasons that some people

Figure 1.

Schematic diagram of a FORTH word as seen in the dictionary. The words are divided into four "fields" holding either code or an address pointer. The code field address contains a pointer to executable machine code or to the parameter field. The address pointer for the vocabulary is held within the parameter field.

use FORTH alone — because of the linking nature between words, the language is fast (much faster than Basic) and for certain cases can be as fast as machine code if properly "tuned". That, indeed, should be sufficient incentive for anyone to learn FORTH who requires speed but does not wish to learn machine code assembly!

Words which access other pre-defined words do not act on numbers alone will have a similar structure, but will branch off to other addresses in the dictionary and jump back again, using these routines exactly as subroutines. Actually, when it comes to examining FORTH words in more detail (which is not usually necessary), they contain more address codes which link the word to various other parts of memory (Figure 1). But it is this structure that "forces" FORTH to have a very low memory requirement, comparable to, and in many instances less than the equivalent assembler routines! For example, if a particular application were being developed (word processor, editor, debugger, etc) then the final program might be compressed into an area as little as 20Kbytes!

This makes FORTH an ideal language to have on small microcomputers where memory size is usually at a premium. Where one might consider, (eg. the writing of a routine for an EPROM loader or communications network) too complex, it is actually an easy matter in FORTH (since you know what to do). Even complex

subjects such as artificial intelligence programming, or digital signal processing, are easily implemented on the FORTH system.

FORTH is used extensively in my work in electrochemistry for the generation of signals applied to electrodes and the collection of data. Under most circumstances, FORTH is fast enough to deliver and capture signals at rates up to several hundreds, and even thousands, of Hertz. On the odd occasion when higher data sampling rates have been required, FORTH, again, has the facility to enable machine code to be used in place of FORTH words.

Assembler written in

So, instead of having to load up a separate assembler-editor to "code" a particular routine, and then have to deal with complicated LSR calls from within Basic, an assembler is written into the FORTH dictionary and the resultant machine code is used (just as another word would be). This is a perfectly natural process because FORTH is, itself, a series of machine coded routines that are "threaded" together through the use of link and calling addresses. My own philosophy has been to write everything in FORTH, and then, if a particular portion of a program needs speeding up (eg the graphics), then those rate-limiting steps would be re-coded in machine code. This is, in fact, probably the easiest way to learn machine code assembly language be-

cause FORTH is so close to it itself.

However, the major disadvantage is that FORTH relies heavily on the programmer to detect and correct mistakes. FORTH does not have all the extensive error checking facilities of Basic, so it does not automatically monitor (for instance) the "zero" condition when one number is divided by another, or the "over-range" condition on multiplication.

Indeed, the representation of numbers in general terms is poor; the 5800 Dragon versions of FORTH do not come with floating-point arithmetic. Mathematical routines have to be done in integer arithmetic — the variety of words for handling integers is actually much better than Basic. However, it is not difficult to write your own fixed- or floating-point software routines (Figure 2), and this is where I think much of the misunderstanding comes in.

FORTH has never had a "standard" in the same way as Basic has, and it probably never will because different people use it for different applications. Not everyone wants an extended arithmetic capability, and, for them, it would only take up valuable memory that could be used for other purposes. The flexibility of FORTH has meant that there are no programming barriers — the ultimate performance is only limited by the ingenuity of the programmer. Sinx, cosine, logarithms, etc. are quite easy to code yourself (Figure 3) since you have been shown how to do it.

The concept of the "stack" and handling of numbers is perhaps the hardest feature

Figure 2 FORTH definitions for some elementary fixed arithmetic expressions

```
SCR # 1
# # VARIABLE A1 # VARIABLE A2
# # VARIABLE B1 # VARIABLE B2
1 | D= A1 / A2 * B1 * B2 | / DOUBLE PRECISION MULTIPLY |
3 B2 # A2 # M= B2 # A1 # D= DMP *
4 B1 # A2 # M= DMP *
5 | FIX DPL # #< IF S-D # DPL / | FIXED-POINT FUNDAMENTAL DP |
6 THEN DPL # 4 SWAP DO IP, D= LOOP #
7 | F= D= # | FIXED-POINT ADDITION |
8 | F= -1 D= - D= # | FIXED-POINT SUBTRACTION |
9 | F= D= SWP JR SWAP JMWWD M/MSD | FIXED-POINT MULTIPLICATION |
10 | B1 #< IF D/MSD THEN ROT DMP |
11 | F, SWAP OVER SWAP C/E E E E | FIXED-POINT PRINT |
12 #6 HOLD #2 SIGN #> TYPE #
13
14 #S
15
```

The numbers first have to be converted into fixed point numbers by the FIX command which counts the number of digits to the right of the decimal place and truncates out integers. If this were not done, the numbers would only be entered as double precision values.

Examples of use:

```
0.01 FIX 5      FIX F= F,      0.0100 OK
10      FIX 0.02  FIX F= F,      0.2000 OK
-4.02   FIX -3.11  FIX F= F,      0.4062 OK

CUMANA Special Price Offer!

DOUBLE DENSITY DISK INTERFACE FOR THE DRAGON 32/64 FROM CUMANA

Dragon owners take full advantage of the speed, convenience and reliability of Cumana's 5 1/4" or 3 1/2" floppy disk drive systems (storage capacities of up to 1.6MB). Cumana are now offering 4 complete systems which come complete with a double density disk interface for the 32/64.

SYSTEM OFFER 1:

Double density interface with Cumana's 5 1/4" DS 250 single drive
£189.95

SYSTEM OFFER 2:

Double density interface with Cumana's 5 1/4" DD 500 dual drive
£304.95

SYSTEM OFFER 3:

Double density interface with Cumana's 3 1/2" DS 315
£199.95

SYSTEM OFFER 4:

Double density interface with Cumana's 3 1/2" DD 352 dual drive
£289.95

Limited offer, all products are subject to availability.
All prices are inclusive of VAT.

ORDER FORM

TO CUMANA LIMITED, THE PINES TRADING ESTATE, BROAD STREET, GUILDFORD, SURREY GU1 2BN. TEL. 0483 403 071.
(Day) Please Tick

of FORTH: to understand. There are two stacks: a parameter stack and a return stack — the return stack is not encountered often except for very specialized operations. Anyone who has had either a Sinclair or Hewlett-Packard calculator will be familiar with stacks and “reverse Polish logic”, as it’s called.

Temporary store

Any stack is simply a contiguous area of memory where data may be temporarily stored. Each stack location may hold a single value, and the position of the last value added to the stack is held in a “stack pointer” (as an address). Putting data on to the stack is much like piling coffee cans high up — the last entered value is the most “visible”; those below cannot be accessed until the top value is removed, but you can see how big the pile is. So, to add two numbers together, for example, both numbers should be entered on to the stack, then the mathematical operation for addition performed (the stack pointer is automatically adjusted at each step).

Letting user to the stack and manipulating numbers since they are on it is a matter of experience, but again, stack operations of first sight can seem a little peculiar. For example, the equivalent of FOR...NEXT in FORTH is DO...LOOP but where Basic would specify the beginning and end limits of the counter as I = 1 TO N, the two limits have to be placed on the stack first and in reverse order so that the “I” comes off first, is N 1 DO...LOOP. But the stack operations are a very powerful feature of FORTH: it is possible to SWAP the top two numbers on the stack, ROTate them, copy one value OVER another, DUPlicate or DROPP the top value, and so on. An example of using the stack to advantage is instead of writing a separate subroutine that uses specific locations in memory to hold initial, intermediate and final calculations, a 16 by 16 or even 32 by 32 bit multiplication can be carried out on the stack — this will almost certainly run faster than the equivalent machine code version.

No language is perfect for all programming tasks. For example, Basic is an easy language to learn and acceptably good at

string handling, but it is extremely slow and is limited in extended arithmetic operations. Attempting to write a fast 32-bit integration routine or an interactive database management system would push the language far beyond its intended scope.

Greatest strength

As a language, FORTH is not exactly the “best known”, otherwise it would be far more popular than it already is — but it promotes the development of efficient, logical, straightforward and compact programs (even by inexperienced programmers). FORTH programs are usually portable across different machines even having completely different operating systems. The greatest strength lies in the building-block approach to programming, permitting segments of code to be immediately tested and debugged on their own. FORTH contains both “system” and “program” development sets, including a compiler, screen or text editor, input/output drivers and memory management — all of which are directly under the control of the user.

What's your best source of information on color computing?

HOT CoCo

Now you can improve your color computing skills... and it's easy to do. **HOT CoCo** gives you more practical information on the Dragon[®] than any other publication. Nearly 150 pages a month!

Every issue is packed with exciting new things for you to do. We won't waste your time with filler stories. You'll get instructive columns:

- **Home's Arcade**—enjoy old-fashioned arcade style games on your computer
- **The Basic Beat**—learn everything you need to program in Basic
- **The Educated Guest**—discover how to use your computer as a teaching tool
- **Doctor ASCII**—get answers to your technical questions
- **Graphically Speaking**—create eye-catching designs that add appeal to your programs

You also get a dozen easy-to-understand articles every month. Games... utilities... programming techniques... tutorials... graphics... education... hardware projects. They'll help you expand what you can do. And complete program listings show you how to use what you learn.

That's not all. **HOT CoCo** saves you money too:

- **Carded reviews** help you make easy purchase a sound investment.
- **Informative ads** let you compare shop from home.
- **New-product announcements** tell you what's available before it reaches the store.

With all this at your fingertips, your subscription could pay for itself with one wise purchase.

And **HOT CoCo** is risk-free. If you don't like your first issue, just write "cancel" across the invoice and return it to us. You won't owe a thing.

Subscribe to **HOT CoCo** today. Twelve big issues are only \$44.97 (US funds drawn on a US bank). Simply fill out the coupon below and return it right now to: **HOT CoCo Subscription Dept.**, PO Box 975, Farmingdale, NY 11737, USA.

Dragon is a registered trademark of Dragon Data Ltd.

YES! Help me improve my computing skills. Send me 12 issues of **HOT CoCo** for \$44.97 (US). I understand that with payment enclosed or credit card order I will receive a **FREE** issue, making a total of 13 issues for \$44.97 (US).

Get a 13th issue **FREE** when you enclose payment or charge it on your Mastercard, Visa, or American Express.

Masterstroke 2

Program: Masterstroke 2
Palatka Software, 35 Parker
Street, Preston, Lancs. PR1E
2B 8J

THE NUMBER of utility packages appearing for the Dragon marketplace just how much of a programmer's machine it is. All the potential it has to accept new modifications to the original software, I only wonder why Dragon Data did not incorporate many of these ideas into their original BASIC interpreter.

Masterstroke 2 is a useful addition to any basic programmer's supply of commands. A number of the rather obvious omissions from the Dragon interpreter such as a MERGE command to merge BASIC program files, Autocopy of keys, Inversion of the screen display (green on black or orange on black are available), and full error messages are included along with a host of other useful commands.

Also made available from BASIC are the Semigraphic mode described in Keith and Steven Blair's book Advanced Dragon and Chapters for the Dragon in the case they are used by BASIC. A number of special graphics commands are supported: GLINE, GDRAW and GSET are rather similar to the ordinary PMODE commands with similar names. It is also possible to have text mixed with the graphics.

Special commands are available for scrolling the screen contents in all four directions. Scrolling can be restricted to a part of the

screen as well. In addition, we also have a facility whereby the 10 number keys can be programmed as function keys when used with the right arrow pressed. These keys have already been given default values but it is also possible to redefine any of them for your own particular needs.

Program listing speed can also be changed, which normally needs a PCMC to set unless you have Masterstroke installed. Another useful utility is a command to convert a Tandy Co Co Basic program into Dragon Basic. Various other commands give more options on the appearance of the display as well as the ability to strip off all the P&Ms in a program automatically.

Just in case the advantages of the Semigraphic modes are not apparent to the user, they have supplied a program written to demonstrate this facility in use. This is another version of that old favourite of ancient Apple users, the little Block Out game, and it serves its purpose well.

All in all we have here a very useful utility package, produced at a very reasonable price of £8.95, with a well-written set of instructions. Once you have mastered the usual Basic fairly well then you could well find this to be a worthwhile purchase. With the facilities it offers at the price it cannot but be very good value.

Job up Guyton

Money, money, money!

Program: Moneybox, Harris
Moro Software, 49 Alexandra
Road, Hounslow, Middlesex
TW2 4BP
Price: £14.95 (Disk)

ON RUNTIME this program the display is converted into a 40 by 20 character on the graphics screen by a Machine Code routine, which is held on the disk and called upon running the main program. The display created is very good, and even includes the C sign.

Also incorporated is an auto-repeat for the keyboard. If anything, this is the most annoying part of the program because they have made the delay before a repeat is registered much too short. I have not been able to time the delay, but it seems to be less than a second.

With Moneybox it is possible to set each of the files (up to 99 separate ones) for a totally different purpose and account structure. Each file is

divided into 10 periods, and the day upon which each period starts can be defined by the user. Within each file there can be up to 99 accounts. Fifty of these are already defined, but can be changed very easily, whilst 28 are left blank for any extra headings which may be required. The first 20 are identified as Sources of funds. The next 20 are sources of income.

Finally, account numbers 41 to 90 are for expenditures.

Moneybox can then manipulate the data on these files to keep your bookkeeping up to date, including VAT calculations if required. All receipts, payments, etc. are easily recorded and from these you can print out reports on to the screen or a printer, prepare budgets and make forecasts of just how much of an over-

draft you will have in a year's time!

It is designed to be used also by a small business as a simple cashbook accounting system. A comprehensive book of instructions comes with the disk, and needs to be read carefully before attempting to use the program. If anything, the only criticism I have of the program itself is that it takes quite an effort to learn how to use it.

Personally, I prefer the spreadsheet approach to the type of task, in that it is easier to follow, especially in asking "what-if" types of questions etc. Having said that, this still is quite a good package and would be very useful for anyone wishing to do such work.

Download

Program: Download, Microdeal, 41 Turo Road, St Austel, Cornwall. Price: £7.95

AS WE have come to expect from Microdeal here is another quality arcade type game written in machine code. The general idea this time is that the little character which appears on the screen has to be controlled by means of a joystick and its button through a series of caverns.

On the way, he has to jump to grab various items or "Treasures" as well as collect a key to pass through doors. In places he also has to climb ropes in order to negotiate some of the more difficult parts of the caverns. Controlling the jumping from the ropes is not easy even without the various horrible cavern-being creatures such as poisonous ants and birds which seem to appear at random and frequent intervals.

At first, it is not that obvious how to control the little man. Specific points have to be reached on the ropes before jumping for a ledge. The jump itself must be made with the joystick in the correct position. All of this has to be learnt as you are playing the game. At first your three "lives" do not seem to last very long, but as you learn how to play the game and learn the necessary

skills and you think you are getting on top, it brings out a few new surprises, just to make life interesting.

The sounds are quite good and the highest resolution graphics are used, which means that you have a choice between black, green or buff backgrounds. Having said that, the quality of the graphics are good and the little walking, jumping and climbing man is quite realistic. I particularly liked the bit where he is trying to climb through a closed door!

If you are into challenging games like this then this is a must!

MICRODEAL

The Dragon Roars

Flam D'Arcy shows how to make your Dragon talk back to you.

A PROBLEM with using sound in BASIC on the Dragon is that it can be tedious and slow for many modern day sounds to be produced. What amazes me is that producing sound in machine code is unbelievably easy. As with graphics, the difficulty lies within ourselves — either you are good in ideas and design, or, like me, you struggle!

Rather than getting bogged down in a lot of detail first, as it is quite a short exercise, try the sample "SOUNDBOX" and I am sure that you will want to read on and begin constructing your own particular "box of sounds" to use in conjunction with your BASIC or machine code graphics programs.

Soundbox

Listing 1 — SOUNDBOX HEX DUMP

Following complimentary remarks from users of the HEX LOAD method accompanying my Disassembler article, I have retained that format.

Listing 2 — HEX LOADER (Basic)

This is the Disassembler Hex Loader Program with changes to just three lines (numbers 3,4,5,47 for those who have retained their copies). For readers who did not see or use it, please turn to Figure A for instructions.

Listing 3 — SOUND SELECTOR (Basic)

A self explanatory sound menu program allowing you to call up and repeat sounds at the touch of a key (you couldn't type EXEC in fast enough for proper appreciation of some of the SOUNDBOX effects).

Using HEX LOADER, enter the SOUNDBOX machine code (Listing 1, Save the code (C:\SAVE\M\SOUNDBOX), 28001,28000,28001) file and save the "SOUND SELECTOR" program. RUN the SOUND SELECTOR.

The machine code program that you have been using is position independent so will work if placed elsewhere in memory. It is structured so that, using an Assembler, simple amendments to the "SOUND ROUTINE TABLE" will enable you to add or delete specific sound routines, building up a composite library of sounds that can be instantly called from BASIC programs by a simple POKE and EXEC. With machine code being so economical in memory, why not put all your sounds into one box, so to speak? Individual sound routines may be changed at any time and the re-assembly will automatically generate the correct current SOUND ROUTINE TABLE values for you.

The CONTROL ROUTINE switches on the sound sources, accesses the required sound routine according to the parameter

passed across (POKE) by BASIC, switches off the sound source and returns to the BASIC program. I used DREAM with PCLEANH/CLEAR200,10000. Source code (object code 8001-8000).

If you construct machine code routines with a Long BRANCH to the program entry point proper, as with this routine, the area immediately following the BRANCH instruction may be used for passing information between BASIC and machine code (who says not to use EXEC because you can't pass parameters? I find this method far easier than USF). With this technique, no matter how many changes you subsequently make to the machine code routine, you are unlikely to need to go back to the BASIC programs to amend the GOSUB or POKE addresses. The method used to branch to the specific sound routines has many advantages:

- It generates position independent code (PIC) enabling SOUNDBOX to work regardless of eventual load position.
- There is no upper or lower limit on the number of SOUND ROUTINES supported by the program.
- Amendments are easy as should amendments cause valid start addresses of the individual routines to change, an Assembler automatically generates an up-to-date table of values.

Use of the PIA has probably been the most consistently contentious issue in Dragon User. Should anyone dispute what I have to say about it or sound, or my explanations, my only defence is that I am neither a scientist nor musician and this is how I understand things to work in my layman's terms — and work they do.

There are two means of producing sound from within the Dragon other than through the external sources of cassette and cartridge ports. One way is known as the "single bit sound signal" (that I have not yet found exciting) and the other, discussed here, is the very flexible and easy to use DAC (Digital to Analogue Converter).

Sound is produced by switching on the equipment that controls the DAC, the MULTIPLEXER CONTROL, LINES, and supplying a series of values 0-83 to the DAC itself. The actual sound made then depends on:

VOLUME	
or	
AMPLITUDE	of the sound made
or	
CORNERNESS	
or	
STRENGTH IN PITCH	
or	
FREQUENCY	of the sound made
or	
DURATION	
or	
RAISE OR CHANGE

I am told that the ear contains a number of receptor cells, each one of which responds to a specific frequency. It is able to recognise a number of different frequencies of sound simultaneously. All sound is made up of amplitude and frequency. Most noises are not a single sound but a simultaneous mix of sounds at different frequencies.

The Dragon is able to output sounds at frequencies far higher than the human ear can detect, so often output needs to be slowed down to make it audible to humans. If you can analyse the sound that is needed, then it can probably be recreated on the Dragon. Analysis of sound for translation to computer terms should make a very interesting article — any later T.M. efforts are produced by trial and error.

The greater the difference between any two consecutive values output to the DAC, the louder the noise is to the ear. The maximum difference is 83 (program 0 to 83).

The longer the duration, or delay, between changing the values output to the DAC, the slower is PITCH the noise sounds. There are no limits to the duration between outputting consecutive values to the DAC, but there are limits to what the ear can detect.

BASIC CHECKOUT TAP 10400

The MULTIPLIER CONTROL LINES are generated by the Dragon locations \$FF01, \$FF03 and \$FF05. The appropriate \$FF01 and \$FF03 settings can be carried out for us by using a BASIC ROM routine at address \$D041. It requires the sound source to be set up in Register B, the sound sources being:

```

set dac
set channel
set loopcount

```

On B (\$80) of location \$FF03, the SOUND ENABLE BYTE, then needs to be set=1. When we have finished using sound, this bit needs to be unset. That is, made zero, but no equivalent to selecting the sound is needed. Sound source: Turn DAC sound source on (object code \$6D84-\$6D94) and turn DAC sound source off (object code \$6D95-\$6DAA):

```

***** SUBROUTINES *****

*** Turn DAC sound source on ***
BASIC $D041
LOC $E000
FOR $E000 TO $E00A
    LOC $E000
NEXT $E000
RETURN

*** Turn DAC sound source off ***
BASIC $D042
LOC $E010
FOR $E010 TO $E01A
    LOC $E010
NEXT $E010
RETURN

```

Sound Subroutine

Sound is actually caused by writing a series of different values to the DAC. The PITCH depends upon the frequency, or time, between changing the values, the longer the duration, the lower the pitch. The VOLUME emitted depends upon the difference between the consecutively written values, the greater the difference, the louder the note, the louder being

created by writing 0 and 03 alternately. Thus, a value of 30 followed by a value of 25 gives the same loudness as writing a value of 8 then 5 or 58 then 63. The DAC is address location \$FF03.

Only 6 of the 8 bits of the DAC byte are used in creating sound, hence the range of values being 0-63, thus:

```

7 6 5 4 3 2 1 0 bit number
100 00 00 10 00 00 10 00 bit value (pitch)
1 0 1 1 1 1 1 1
value=63(0F)

```

However, the six bits used for sound in the DAC byte are not bits 0-5 but 3-7. Furthermore, bits 0 and 1 are used by the Dragon for other things and must not be altered by our routines. The source code to do this is as follows, the actual value being set up for the routine in Register B (object code \$6D81-\$6D83):

```

***** Note sound in Reg.B *****
BASIC $D043
LOC $E020
FOR $E020 TO $E026
    LOC $E020
NEXT $E020
RETURN

```

The PITCH SUBROUTINE is quite simply a DELAY LOOP (in FOR N=1 to 500000). It is the time to elapse away before entering the next value in the DAC. The longer the delay, the lower the pitch of the current sound being made. The source to do this is as follows, the delay count being set up for the routine in Register B (object code \$6D85-\$6D87):

```

***** pitch delay routine *****
BASIC $D044
LOC $E030
FOR $E030 TO $E036
    LOC $E030
NEXT $E030
RETURN

```

Datapen

A QUALITY LIGHTPEN

for the DRAGON 32 microcomputer

Datapen**£25**

Inclusive of VML, RMP. Two different drawing programs provided free with each lightpen. "SKETCH" and "SHAPE-CREATOR". SKETCH is a superb high-resolution colour drawing program allowing both precise drawing and freehand sketching, pointing etc. SHAPE-CREATOR is a high resolution binary shape drawing program.

SUPERIOR PROGRAMS

- Large storage of your work
- Good documentation
- User routines provided on-tape and on printout

Also available for— V10-25, CMM-64 or BBC B. Please state your requirements when ordering.

Send cheque or P.O. for £25 to—
D.U.S. Datapen Microtechnology Limited,
Kingsclere Road, Overton, Hants. RG25 3UB

Or send S.A.I. for details. Now available from good computer shops.

SUPERIOR PERFORMANCE

- Insensitive to ambient lighting
- Responds to different colours
- Program accessible LED lamp readout
- Switch for program control

"It differs from all other lightpens available for the Dragon in that it is a far more sophisticated tool... this program (Sketch)... clearly demonstrates the superiority of the Datapen!"

DRAGON OPEN FILE

Send us your Dragon programs, beginning with a general description and then explaining how the program is constructed. Take care that the listings are all bug-free, enclosing a cassette and, if possible, a printout. We pay £8 for each original bug-free program published, double for the program of the month. If you have any problems with the listings, please send your queries to the appropriate author, Dragon Mail, 12-13 Little Newport Street, London WC2H 7PP.

Heartbeat

From Vince Goshall in Northumberland
THIS PROGRAM simulates those heart-rate testing machines which are beginning to appear in a variety of shops around the country.

Like the machine it is intended for

amusement only and not a serious application. The program is calibrated for the average adult's heart-rate and it should be noted that children's hearts beat faster than an adult's.

Conversion

From P Howarth in Manchester

CONVERSION is a simple program to convert various measurements of one kind into its equivalent number in another.

This program will convert inches to

centimetres, feet to metres, miles to kilometres, gallons to litres, ounces to grammes, pounds to kilograms and Fahrenheit to centigrade.

```

Wizard Software

TRACE CHASE

14.95

A colorful, 100% realistic video game presented in high resolution graphics. Move your way across the colorful world of FORTUNE. There are five color castles in the country. The first castle has no money but with A.L. QUANTON and TRINA, the fourth and fifth with the concept of Fortune's oilmen. Operating this National limited is limited time only. We expect to have more of this exciting machine available with the next copy.

STARTING FRACTIONS

23.95

A moving program designed to furnish all private school children which presents all levels of the concept of a Fraction. There are five color castles in the country. The first castle has no money but with A.L. QUANTON and TRINA, the fourth and fifth with the concept of Fortune's oilmen. Operating this National limited is limited time only. We expect to have more of this exciting machine available with the next copy.

TIME PORT — The Staff of Life

24.95

The second exciting strategy computer game in the time that games. Operating strategy game and the first version has been completely revised to include a new game play. This version includes a new, more exciting, more realistic, more educational, more fun game play. It features your own personal observation and evaluation. (Spend only your curiosity)

COMPUTA FRUITS

25.95

A full time fruit machine computer program designed for interactive graphics training. A colorful, fun, strategy, high speed, faster than sound, three color, rapid concept, fruit machine game. Includes five, five color manufactured graphics.

FRUITY

Fruity is quite simply the best fruit machine simulation available for the Dragon.
Features include realistic full spinning reels, nudges, gimmicks, gamble nudges and gamble wins. Just **CLASH** into Las Vegas!

Read what the reviewers say!
 "Perfectly imitates a real fruit machine" — **DRAGON DELTA**
 "It's addictive... superb mimicry of the spinning reels" — **PERSONAL COMPUTING NEWS**
 "Nice use of colour and sound and good animation throughout. A pleasure to play." — **PERSONAL COMPUTER NEWS**
 "Very good sound and graphics. It could become addictive!" — **HOME COMPUTER WEEKLY**

Folly Farm's CHICKEN RUN

What strategy will you use to reach Folly's Hall of Fame? The hen lays the eggs, and must be fed. The Farmer collects the eggs and delivers the corn. Your joystick controls them both! Watch out for the hungry foxes! Don't let the egg hatch out or the chicks will eat the corn and the hen will get hungry.

One or two players - five levels of difficulty - ten screens scoring - ten game play - four - six characters fully interactive - full colour with graphics - four screens, music with dramatic scenes
To IMPOSE, 149 Balfour Hill, London SW12 8JD.

DRAGON 32 PC MODEL 8 FROM £89.99 FROM C/D OR ELECTRON 747 FLIGHT SIMULATOR

Superbly realistic instrumentation and plot's view in flight simulator which includes emergency such as engine failure and systems failures. This program uses high resolution graphics to the full to produce the most realistic flight deck display yet seen on a home computer. There are 17 real time and 12 on/off indicators, two diagrams, two control consoles, throttle, altimeter, air vents, flap, gear, spoilers, landing gear, warning lights, etc. etc. To use the runway in real perspective. Uses controls and includes options to start with take-off or random landing approach. "A real simulation, not just another game." (Your Computer, APR 1982)

Complete 100% tape and soft included.

I'LL BEGAIN with a grivelling apology to reader Rosalind Redwood of Bristol, who I mentioned in the January issue as having problems with *Castro Island* — she couldn't get the treasure back because the transporter disappeared when she'd bartered with Trader Jack for the keys. I dared to suggest that maybe Rosalind hadn't found the treasure after all, but some jewelry that appears earlier in the game, basing this on the fact that you need the machete from Trader Jack to find the treasure, set the trap.

In fact, Rosalind had already done that, but found, as did other readers, that a second trade caused the transporter device to disappear. So, how do you get round it? Well, it seems to depend on the order in which you trade. If you find the treasure, then attempt to trade for the keys, the device goes. If you get the keys, return to open the desk and read the notes, then go back for the machete and continue to find the treasure, the device will still be there. Sorry to the stir on your status as an adventurer, Rosalind.

A letter this month from Kerry O'Sullivan, with no address but containing the proud announcement that after twelve months' hard labour, Kerry too has completed *Castro Island*, having had trouble with the professor's notes. John Martin has sorted out *Castro Island* and polished off *Black Sanctuary*, finding the letter rather disappointing, but he's now stuck in *Madness and the Minotaur*. John's problem is finding the oil for the lamp. So, if you can spare clues, or even some oil, write to John at 114 Blackmoor, Otton Multisome, Peterborough, Cambs. John's also finished *El Diablo*, "after a lot of frustration and dead cows," he says, so maybe you can swap tips with him.

Another reader in need of help is Pauline Hampson of 19 Cherry Lane, Lawton Heath, Alwyer, Stoke-on-Trent ST7 3GG. Pauline is one treasure short in *Rings of the Wizard*, and not even *Microbes* can help her. She doesn't say which treasure she's found, but if anyone can help do write to her. In return Pauline can help with the dreaded *El Diablo* and *Castro Island* and says she can recommend Channel 5's *True Martin*.

I'm afraid I can't recommend Channel 5's *Circus* as highly as some of the others in the Mysterious Adventure series. I ha-

ven't had time or space to look at them all yet, but I loaded up *Circus* the other evening to see what it was about. The following evening I finished it, without the aid of a safety net. In fact that's reassuring, you do need the aid of a safety net, and a few SAVES here and there, but with only about 33 locations it's not the hardest adventure you'll ever have to tackle.

The story is that your car has run out of petrol on a lovely country road ... dear me, the mishaps that happen to us innocent adventurers. As you go trudging over the fields and roads you come across a circus tent ... but is it real or haunted?

And where's the light that enables you to see inside? There's a cage containing a sleeping tiger, and a tank containing a seal, so with just these two creatures and a solitary clown is it any wonder the circus closed down? Take care going up to the tussles and the tightrope, and once you've found a source of light you shouldn't hang about as its life is limited.

The adventure sets you two main problems. One is in finding just the right words to solve a particular problem, and this to my mind is not what adventures are about. You know what you want to do, but what are the exact words the program's looking for. In *Circus* there's a chest which you know you must have to open, but after OPEN CHEST, HIT CHEST, BASH CHEST, and a dozen other attempts I was about to give up. When I eventually discovered what you had to do I could have kicked the programmer.

The other problem *Circus* sets is that you only have a certain number of moves before your light runs out, and also a

certain number when you get into the end sequence, so you must work out the most economical way of moving things around and solving problems. When I did it I was on my very last turn as I issued, with fingers crossed, what I hoped was the final command. By the skin of my teeth then, I did it, but I hoped for more than a few hours of entertainment from a £9.95 adventure. Fortunately, not all Channel 5's are so simple, and I did have a letter recently from a reader who enjoyed *Circus* a great deal, so rate your own minds up about that.

Maybe I'm just in a grouchy mood this month, because I don't like the other adventure much either! This was *Tower Castle* from Quotbeem Software, whose title *The Shrunken Scientist* impressed me last time. When I loaded up this one though it looked rather familiar, and sure enough it was an adventure that had been published and then withdrawn last year under the title *Wizard Castle*. Your objective is to rescue a beautiful princess from said castle, so I don't know whether this will appeal to the many female adventurers I get letters from (it's the only reason I write the column).

What won't appeal to anyone is the lack of a SAVE feature, particularly as the game takes a delight in killing you off without warning. This doesn't matter too much early on, but when you're well into the adventure you don't want to discover that you've stepped through a door and fallen 100 feet into the mud so you have to start again. The location descriptions are very brief, with no atmosphere at all — well, how can you have atmosphere when you're in this drearily old castle a table which has a drawer requiring a combination to unlock it? The combination is on a card elsewhere, and it's typical of the lack of logic that you can't read the card in any location other than the one where the table is. Why on earth not?

I had been hoping to include reviews of the two new ones from Adventure International, *Soldierman* and *The Sorcerer of Clamorous Castle*, but the review copies haven't arrived. They'll be here next month though, if I have to trek to Birmingham cap in hand. Goodness, I might even buy them. Don't let the editor, though, or I'll be drummed out of the Reviewers' Union. ■

DRAGON
32

1-99

WE FEED THE DRAGON

3-99 TANDY

COSMIC DRAGON — Venture where no man has before to go faster. Visit the galaxy from within the safety of your starship. But not for long... no star that'll destroy it will challenge your reflexes and the power! Superior sounds and graphics. £2.99

SUPER SPACE — There is a computer behind every quarrying the previous rule. Great, guards and lines. You have only one minute to ramp out the operation but you can do it if you know how. Tandy Colour £2.99

BOMBING MISSION — You know it, the old mission must be repeated before you come back to face with the Bombed Mission. You are down from causing the stock price to rise to prevent another accident. £2.99

THE BLOB — You have probably read the novel to open the film — now you can play the game. Beware! Coming from the last issue, it is a powerful danger for you to challenge. £2.99

OIL MINE — Complete in five strictly events — the more, the more you get, money and high gain. Features include: high graphics sound, water sounds and full controls. £2.99

FRENZIED FUN — Every underground in the world must search the secret game and the codes, who get lost and an escape the attempt of force the money to be free full of money. £2.99

BAMBI — Open yourself to a world of fun on both and get a new experience that will challenge the look. £2.99

SPACE THE BOLD — Upgrade program for Bambi. Stop! Please come along. Stop! Please come along. Stop! Please come along. Stop! Please come along. Stop! Please come along. Stop! Please come along. Tandy Colour £2.99

BAMBI'S SUCCESS — Once you get, please and please. They are all from all you have to do it (not again). Bambi — sounds like sound — but not when you get the thing. Please in a free eye and message. £2.99

BULLET TRAIN — These scenes of a bullet train for all you make train. Bambi's success, please, Bambi, Bambi, Bambi, and the sound that full monster. Bambi's success. £2.99

BOMBS AWAY BASIL — If you're trying to defeat the bombs before he is attacked by his only brother bear, PROUDLY. Yes, the truth is finally out and, the cunning names please. Spiders near the bombs, then plant, the first bit are pretty thick — and good, but don't be fooled, they get very close instead. Also in machine code with some of the finest graphics you have seen on the Dragon. £2.99

MACDOUGAL'S LAST STAND — Jamie MacDougal seems legends in the Scottish Highlands in search of his clan's last language. Also opening out there are two Sasannachs (Sagans) as Scottish names who are not to stay Jamie's choice. £2.99

MISSION ATTACK — Try your hand at flying a fighter jet from an aircraft carrier at sea, taking off, crash land and missiles. Try to take mission over land. £2.99

LASER RUN — Fly your starfighter down the trench and take off! Great! Under a cross plane, 2D graphics and include sound. £2.99

SIMPLY

The best value for money software
you will ever buy for your
DRAGON 32......and that's not just our opinion...
on one cassette
for only **£3.95**

Dear Sir,
After purchasing your game cassette for my Dragon 32 I was a little disappointed that the game was not as good as I had hoped. The game was not played with him. The game was played in a very boring way. I can't remember the name of the game but I would be happy to give you a copy of my game, including the program, data, and the cassette. The only way you can see it is to send me a postcard. I would be happy to do it for you.
Yours sincerely,
Mr. G. Smith,
10, White,
London.

INTERPLANETARY TRAVEL

Space travel is just the start of the excitement in this game. You'll be exploring the vast galaxy of the Milky Way, discovering new planets, and meeting strange creatures. It's a game that will take you to the stars. The only requirement is a Dragon 32 game cassette. Interplanetary Travel.

CRASHOUT

Are you sick of the weather? You need to visit the city of Crashout. Standing before the entrance, you'll see a sign that says "CRASHOUT". The game is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

SHUTTLE RACER

Only a brave man could go to the SHUTTLE RACER. The game has a total of 200000 of the most exciting and fast-paced action you'll ever see. The game is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

WHEELS

Are you sick of the weather? You need to visit the city of Wheels. The game is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

WORLD

Is it still in the world? Can you turn your world into a better place? The game is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

EMERALD PALACE

The emerald palace is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

AIR WARRIOR

A game that is guaranteed to take your brain and your senses to the limit. The game is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

AIR WARRIOR 2

Another great game! The second instalment is a fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

EMERALD

Fast-paced action game with many graphics and sound effects. It's guaranteed to be the most fun game you've ever played.

DRAGON DISKETTE AND CASSETTE BUSINESS SOFTWARE FOR DRAGON 32/64 - DISKETTE PROGRAMS FROM £19.95 INC. VAT - CASSETTE PROGRAMS £11.95 INC. VAT

GET DRAWING

Controlled and under the system. Draw on your card reading - use it to fill areas and erase parts. For more screen than almost any other program, use screen, fill, free, freehand, circle, line, text etc.

GET INVOICES & STATEMENTS

Speedy invoicing. Program will generate invoices for description of order, new & stock up to 100 items, address, 10 items, usually printed and stamped, ready. A separate DRAGON program allows you to define to order - and additional, variable rate rates, discounts, commission, etc. Complete with your own customer information. It produces an invoice, additional 'add' on the PLUS order form, invoice, statement, and a separate order form, invoice, receipt and statement.

GET MAILING ADDRESS BOOK

The highly successful Address Book allows you to store names, addresses and other items by Block/Code or RECORD RANGE. Names addresses by street, by town, by region, by name and other options. Brown, Record etc. A special file program, 1.000 records in 10 files etc.

GET BILLS

The Bill/Code System is designed to receive pen, paper and book calculation with a separate program for register, TV set and other. Each program comes with a storage system including 1000. Use and its operation.

The Memorandum System will be convenient for you and all others. They can be numbers relating to telephone can be printed, recorded, or written. They can be

printed, numbered, addressed, dated, forwarded by, screen view and other options. For needs of treated items can be used to make copies, compare or replace. More, pen, line, window, participants can be written in separate Memorandum to the system for the various individual records and can be used to see listing in time. Memorandum operations allow powerful (MS-DOS) programs to be carried out at the touch of a button. Screen size of window can be used or type of line.

GET BIRTH DATES

Controlled Birth Dates. Alpha system, references, birth dates, identification card cards, card numbers or other items, register entries. 1.000 items data on the file on a compressed file. Programs allow operation over compressed range of data. Birth date, to order, specify, compression options.

GET BUSINESS ACCOUNTS

Business period 4 program, for account/audit/trace memorandum system that will set file, a single screen facility, access to data and programs with a 40 character screen for programs. Transactions List, Ledger, Invoice, Cash, Memorandum, account customer records, Bank Summary, Year totals, Annual Balance Sheet. Primary options make this a complete program. Credit and sales, commission and already listed with item account system to allow prior-to-file retention of your Memorandum.

GET HOME ACCOUNTS

A family friendly, Best use of your household budget. Many options include (printed) and Alpha Budget, print-the-whole book, statements, print balance sheet. Graphical representation of cost and other items, printing of receipts and bills, and much more.

... DOWN TO EARTH DISK SOFTWARE FOR SMALL BUSINESSES ... READY NOW ...
... USE STANDARD DRAGONS ... WITH CUBANA OR DRAGON DRIVES ... NO MODES NEEDED ...

GET STOCK (BY STANDARD CODES) INC. VAT

All stock details are fed in to standard floppy disks to produce screen displays and printed receipts for stock, stock movements, stock storage, Stock's 1000 items, stock purchase, in order sheets, and much more. Receipts may be printed by number or part description, and analysis into your additional facility. 1.000 stock items per disk.

GET READY TO SHIPWARES (BY CODES) INC. VAT

Save Invoices (Statements) together with integral Order & shipping package. Use it to generate customer statements, customer orders, new listing lists to display and statements. Special Accounting file, and standard program. 300 addresses can be stored.

Dragon Answers

Light connections

I AM trying to find out where the X and Y screen locations are kept. I have built a light pen for use with the Vic, but do not know how to program the Dragon to accept inputs from a light pen or even how or where to connect the light pen to the Dragon.

D Tuckwood
29 Malvernwood Ave
Plymouth
Plymouth

THE TEXT screen position is stored in locations 136/137. To get the equivalent print (X position, Y position) use `PRINT (136) / (137) - 128`.

The graphics co-ordinate is stored in loc 290, and the current co-ordinate is loc 300. However, without an interface to the Dragon's cartridge port, the computer can not use light pens which return screen positions, only light sensitive ones which plug into the joystick ports.

What's your number?

I AM looking for a ROM address in the Dragon. Specifically, I am looking for a ROM call subroutine that is called by BASIC's main command interpretation loop — the main loop calls it... in TOS68 CoCo it is B4008, when it is set to execute the next command.

On entry, it is assumed that `RAM_BAC` is pointing to the next BASIC command to be executed, and that the A register contains the first byte of that command. After the ROM call returns, this subroutine returns program control to the calling routine with an RTS.

Maxwell Lee (Mister)
Rich-Idley
3 J Jemmetts Road
Dorset
B32 9DQ Devon

THE ROM address you need to use on the Dragon is 58446 hex, or 3A958 decimal. This is slightly different from the CoCo routine you mention in that the "A" register need not be set up first.

Locations 186/187 should be set up to point to the start of the tabulated command you wish to execute. Also, note that the Dragon's letters have different values to the CoCo's.

Read between the lines

I AM the owner of a Dragon 80, Dragon Diskette station and a Microline-80 printer.

When I am using the OS-9 system and trying to write a letter with the Stylograph or the Tutorial letter in the Stylograph my spacing between the lines is too big. The distance between the lines is 10mm and that is too much. I have tried all the Print Codes in the OS-9, but with no results.

Does the Microline-80 printer not work with the OS-9 system? Besides this I have had no problem with the printer, if you have any solution to this problem, please let me know.

I also own a TRS-80, Model I, Level I, with expansion interface 32K. Is it possible to use the Dragon Diskette station on the TRS-80, or do I need any particular connection. I have not used it on the TRS-80, but I can see that the Dragon cable fits in the TRS-80.

John Hagen
Clympeir 72a
5071 Lichtenford
Bergen
Norway

IF 320000 to me as if your printer is leaving a blank line between each printed line. This is caused by OS-9 outputting both a CR and LF code at the end of each line. You can get over this by altering the dip switches in your printer, if possible, or alternatively, use the following procedure in OS-9 mode (p - 1) (to stop automatic loading).

Press Stylograph speed the output to a file, such as `HD:PRINT`, then from OS-9 type: `copy HD:PRINT`.

To your second question, TRS-80 drives can be used with

the Dragonette or Deltastore controllers. However, don't try to use any other interface, such as the Data disk controller, as these will not work.

I can't get no satisfaction

I HAVE been having trouble getting the commands GET and PUT to work. I have written a program which requires a star to move left and right across the screen, but I have been unable to achieve this. I have enclosed the program and would be grateful if you could forward a look at it and tell me where I went wrong.

```
30 PRINT "I. J. COOMBS" : GOTO 10
30 AB = "MAGS.COMING.ON.PAPER"
PRINT AB:GOTO 1000:GOTO 10:GOTO 10
30 GOTO 1000:GOTO 10
30 GET (X) = (Y) + 32 : GOTO 30
30 GOTO 10
30 PUT (X) = (Y) + 32 : GOTO 10
30 GOTO 10
```

J Wilson
14 Amberley Rd
Stoke Lodge
Patchway
Bristol BS21 5BR

THE GET and PUT commands seem to cause more than their fair share of trouble to users learning Basic. The problem with this program is that the `G` is missing in the GET statement. This is `1000:10 GOTO 1000:GOTO 10:GOTO 10`.

The manual states that the `G` (which instructs full graphical detail to be stored) is optional, but in practice it is usually wise to include it, else the image displayed by PUT can be somewhat unrecognisable. There is no need to GET an image more than once, so line 80 can be changed to GOTO 80.

Don't hang up on me

I SEEM to be having problems with the printer port. When I poke data to 85281-2 (which appears to be the printer port) the system "hangs up". This also occurs using L167. I am using a "Paper Tiger" centronics interface printer.

Could you tell me the correct address for IO ports (cartridge and printer)? Is the printer port a 6621 PA "B" port?

D Coombes
29 Buckland's Gate
Calmore
Hants SO4 2GB

THE PRINTER port is addressed as location 85281 only. Poking data to location 85281 is likely to cause the machine to crash, or at least the keyboard to stop operating. If the machine hangs up when you use L167 then it sounds as if the printer "busy" connection is faulty. Try typing `!PEEK(85281)&AND1`, which should print a 1 if the printer is ready. If you get a zero with the printer connected, then the "busy" input is not working.

The printer port is a 6621 PA "B" port.

Error - what error?

USING THE following short program to PEEL through the Basic ROM, I came across the statement "TEXT IS IGNORED" at locations 34842 to 34854 (is this an error message?)

```
10 FOR A = 0 TO 1000 TO  
PRINT A:PEEK(A)  
30 IF B TO AND B LT THEN PRINT  
CHR$(A)  
30 NEXT A
```

S Moore
7 Birch Ave
Grimsby
South Humberside

THE "TEXT IS IGNORED" message is generated when the mapy items are entered in an input statement. For example, if you enter 1,2 (enter) then the input command reads INPUT A, this message will be displayed. Unlike other errors it is only a warning, and the program does not stop.

Unfortunately, this is not mentioned in the explanation of the input command in the manual, or in the errors section.

Four Dragon 64s to be won

CAN YOU FIND the two whole numbers which, when multiplied together will come to exactly 1,000,000? Easy? How about

two squares. By taking 21 rectangles of card, each 2 x 1 inches in size, is it possible to completely cover these remain-

ing squares with the cards? The grid to have alternate squares shaded like a chessboard. If this is done the two missing squares will be both of the same colour, either white or black. Now a 2 x 1 card can only cover one square of each colour however it is placed, and once thirty of them have been positioned, the two unoccupied squares will be of the same colour, and so cannot both be covered by the remaining card.

Now let's return to our original problem. We have seen how two factors of 10^6 can be found, neither containing any zeros. Are there any other powers of ten that can be similarly expressed? Ten itself has factors of 2 and 5, and one-hundred has factors of 2 and 25. In each case these factors are found by simply taking 2 and 5 to the corresponding power to which we have raised the 10. The results are shown as follows:

$10^2 = 2^2 \times 5^2$ times	2
$10^3 = 2^3 \times 5^3$ times	25
$10^4 = 2^4 \times 5^4$ times	125
$10^5 = 2^5 \times 5^5$ times	625
$10^6 = 2^6 \times 5^6$ times	3,125
$10^7 = 2^7 \times 5^7$ times	15,625
$10^8 = 2^8 \times 5^8$ times	39,062

Unfortunately 10^9 is equal to 390,625, which, as it contains a zero, is not admissible, and so 10^9 cannot be so factored.

This month's competition is to determine how many other powers of ten have two factors which do not contain zeros.

As a hint, and to save any sleepless nights, it has been established by a computer in America that all powers of 2 from 2^{10} to 2^{1000} contain at least one zero, so we need only concern ourselves here with powers up to 100.

adding the stipulation that neither number must contain any zeros. This makes things a bit harder — or even, you may think, impossible. That is unless you happen to hit upon a novel method of approach whereupon the solution becomes simplicity itself.

One million is equivalent to 10^6 raised to the sixth power — that is 10^6 . Now, 10, as well as having factors of 10 and 1, also has factors of 2 and 5. So, just as 10^6 equals one million so too does $2^6 \times 5^6$, this can also be written as $2^6 \times 5^6$ which works out as 64 times 15,625. Thus we arrive at our answer to two factors of one million, neither containing any zeros.

Puzzles of this type in which the solution is readily apparent but only if you hit upon such a lateral method have become known by the not inappropriate name of 'aha' problems. It was for much the same reason that the concealed sunken forces, popular with landscape gardeners such as Capability Brown and his contemporaries, were called 'ha-ha's' mainly due to the expression of surprise when encountered for the first time.

Here is another 'aha' of the mathematical kind: Draw an eight-inch square, and rule it up into a grid of sixty-four one-inch squares. Now draw out two diagonally opposite-corner squares, so leaving sixty-

ing squares with the cards?

If you were to try to solve this by actual experiment, you might find that your first few attempts failed. By the time that you had had a couple of dozen tries — also equally fruitless — you might reasonably suppose that the solution was difficult if not impossible. But how can it be proved? Of the millions of different ways in which the cards can be placed is there not one that will succeed in covering all the squares?

The answer is that it is impossible, and the solution is beautifully simple. Consider

Prize

THIS ISSUE's Competition is giving away four Dragon 64s to four lucky winners of this competition.

Rules

TO WIN a Dragon 64 you must both show the answer to the competition and how to solve it with the use of a Basic program developed on your Dragon. Please do not send in a cassette containing the answer. As a timesaver complete the following sentence in 18 words or less. 'I could like to own a 64 because ...'

Your entry must arrive at Dragon User by the last working day of April. The

winners and the solution to the puzzle will be published in our July issue. Entries will not be acknowledged and we cannot enter into correspondence on the result.

January winner

THE CENTRES of the disk should be 2.7425000 inches apart (approximately). The 10 winners, who will each receive six games from Cable Software, are: A Clark of Wivel, Kevin Desmond of Carl, Boris Letanic of Paris, Justice Perry of Wales, Gordon French of Northampton, J Boyer of Woking, J Joby of Devon, Dominic Brodick of Tewkesbury, J Pirelli of Belgium and C Daise of Preston.

RETURN OF THE RING

THE RING
OF
DARKNESS
PART II

At last the saga
continues ...

The Guardian of Shedd is defeated, the Hell spawned hordes of the Evil Sage lie at bay. Now Ringbearer, wielder of the Four Bright Rings, must face the greatest challenge to return the Ring Of Darkness to its creators on the hidden planet Ringworld ... And somewhere at the ends of time the forces of evil are preparing their revenge.

After one year of development, Wintersoft are proud to present the most sophisticated game ever created for the Dragon 32. Written 100% in machine code, RETURN OF THE RING is an astounding multi program blend of superb high resolution colour graphics and advanced routines that allow you to communicate with your computer in complete sentences. You will face challenge and excitement as you and your Ringworld companions travel a mysterious planet and brave the dangers of an amazing three-dimensional forest moon. An epic adventure controlled for its wealth of detail and diversity.

May luck travel your path.

Please note: RETURN OF THE RING is a complete adventure. You need not buy THE RING OF DARKNESS to play it.

Complete control at your fingertips

The smooth control of the Voltmace delta sprung return joystick is now available to Dragon owners. Each joystick has been individually tested before it leaves our factory, following extensive robot testing to prove the design (we tested it more than a million times). This means that not only will your joystick be strong, tough and reliable,

but it ensures long life, accurate control and with the choice of red or green

fire buttons, gives instant recognition between the left and right joysticks.

If you are not completely satisfied with the delta 3d, return it to us within seven days for a full refund.
